1. SUMMARY OVERVIEW OF THE MARKET SITUATION

1 General market situation

PRICES

Average tomato prices normally decrease in January after the Christmas period;

this year is an exception to the general rule and we see very important average price improvements so far for January when compared to December.

In winter months the small productions in some MSs (which implies in the absence of data) results on little meaning for the overall average.

EU average prices were very volatile during 2018.

The graph of prices for 2018 shows huge changes in relatively short periods.

Price differences at MS level are big many times and diverging trends are rather common.

Background

In 2018 price levels were very low during Feb-Apr, Aug and at the end of October.

EU average prices recovered in Sep and declined again in October.

October declines were especially important for two groups of varieties: round and vine.

EU average prices have been at historically high levels during most of the year 2017 (with a relative low figure for the year in May).

May 2017 was a difficult month (May to Aug in the case of NL) due to the lost of the Russian market.

Price changes in January 2019 (partial) compared to December 2018 (#) by variety group and MS (provisional figures):

- Cherry tomatoes: +26% in ES, no data in FR, +10% in IT and +26% in NL;

- Vine tomatoes: +11% in ES, no data in FR, +17% in IT and -4% in NL;

- Round tomatoes: +3% in ES, no data in FR, no data in IT and no data in NL.

Summary of changes:

* very significant price improvements for most varieties and countries;

* one exceptional price reduction, vine tomatoes in NL;

* round tomatoes had a lower increase than the other two varieties.

-(#) Methodological remark: random absences of reporting for quotations in some markets and varieties leads to less accuracy of averages.

IMPORTS FROM MOROCCO - Background and recent figures

The "normal" quota usage level is as follows:

100% usage in October, 87% for November and 88% for December.

The "additional" non-cumulated quota usage level is as follows:

29% quota usage for November and 43% in December (provisional figures).

Total imports from Morocco compared to the 5 year reference period (2013-17):

+57% during Jun to Aug, -67% in Sep, +70% in October, -10% in November and +2% in December (Annual figure for 2018: +6% // Taxud data).

EXTRA-EU EXPORTS since OCTOBER 2017

The EU is and should remain a world leader for top premium tomatoes in order to help EU farmers income (which have to face high costs and high prod. requirements).

Switzerland and Norway are the two first export destinations in value terms during the same period (detail below).

Belarus and Russia belong to the top 5 in volume terms but have prices below average (Russia) or very low (Belarus).

Top destinations of EU tomatoes since October 2018 (ordered by value; source: DG Taxud):

2 Challenges for a more balanced market

Consumption

- Low among young people and decreasing in some MSs and some population segments; improvement needed through:
 - * School programmes: consumption levels of the young populations are decreasing.
 - * Promotion and educational programmes.

Export diversification

- * Apple&pear export diversification seen as an example for other f&v products
- * Not sufficiently developed for some products, including tomatoes;
- * Need to consider all possible options: "Made in the EU", "Made by the EU" and "Made on the EU".

Technological innovation

- * most EU Member States cannot compete on manpower costs but innovation can compensate for that;
- * energy management at farm level seen as a key element for supply control, cost reduction and complementary income.
- * more focus in quality and value instead of focus in just quantities.

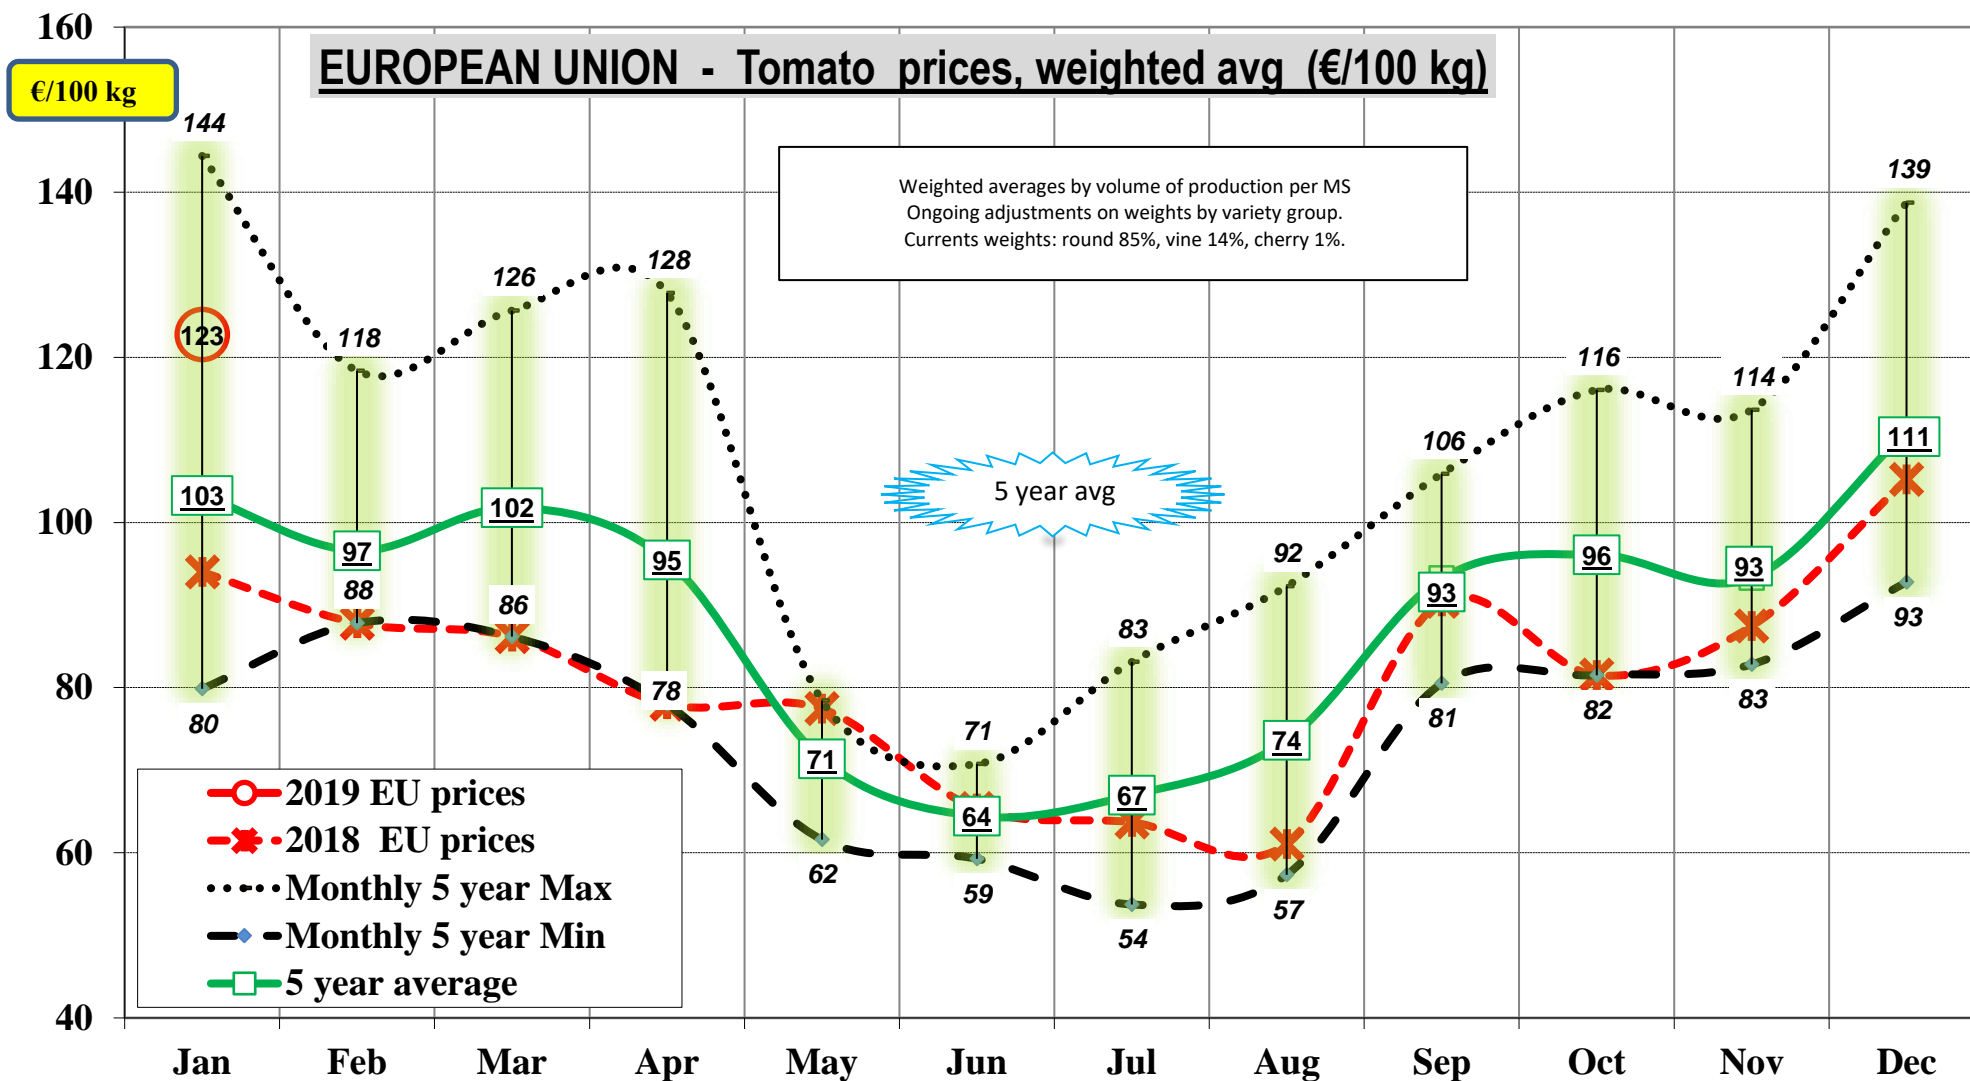

Production and marketing strategy for farmers

- * need to focus more on quality and values rather than on quantities;
- * diversification of supply and product differentiation better than large volumes on common product.

Marketing channels

- * need to look for short market circuits;
- * group structures help to concentrate supply at origin points and improve producers' negotiation position.
