00153 Rome, Italy

**SUBJECT: DISTRIBUTION OF THE REPORT OF THE 46<sup>TH</sup> SESSION OF THE CODEX COMMITTEE ON PESTICIDE RESIDUES (REP14/PR)**

The report of the 47<sup>th</sup> Session of the Codex Committee on Pesticide Residues will be considered by the 38<sup>th</sup> Session of the Codex Alimentarius Commission (Geneva, Switzerland, 6 – 11 July 2015).

**PART A: MATTERS FOR ADOPTION BY THE 38<sup>TH</sup> SESSION OF THE CODEX ALIMENTARIUS COMMISSION:**

1. **Proposed draft maximum residue limits for pesticides at Step 5/8** (para 118, Appendix III).
2. **Proposed Draft maximum residue limits for pesticides at Step 5** (para 118, Appendix IV).

Governments and international organizations wishing to submit comments on the above matters, should do so in writing, in conformity with the *Procedure for the Elaboration of Codex Standards and Related Texts* (Part 3 – *Uniform Procedure for the Elaboration of Codex Standards and Related Texts*, Procedural Manual of the Codex Alimentarius Commission) by e-mail, to the above address **before 20 June 2015**.

**PART B: OTHER MATTERS FOR ACTION BY THE 38<sup>TH</sup> SESSION OF THE CODEX ALIMENTARIUS COMMISSION**

3. **Guidance to facilitate the establishment of maximum residue limits for pesticides for minor crops** (including Appendix on Methodology to assign Crops into Consumption Categories) (for inclusion as an Annex to the *Risk Analysis Principles Applied by the Codex Committee on Pesticide Residues*) (para 155, Appendix XI, Part A).

Governments and international organizations within to submit comments on the above matter, should do so in writing by email, to the above address, **before 20 June 2015**.

**PART C: REQUEST FOR COMMENTS AND INFORMATION ON:**

4. **Matters related to the 2015 JMPR including concern forms** (paras 36 – 114, Appendix XV).

Those countries and observers specified under individual compounds concerning matters related to the 2014 JMPR (e.g. GAP, residue evaluation, intake assessment, etc.) on specific pesticide/commodity(ies) to be considered by 2014 JMPR, including submission of concern forms together with necessary data, are invited to send information or data **before 30 June 2015** to:

- Ms Yong Zhen YANG, FAO JMPR Secretary, Viale delle Terme di Caracalla, Rome 00153, Italy, E-mail: [YoungZhen.Yang@fao.org](mailto:YoungZhen.Yang@fao.org);
- Dr Philippe VERGER, WHO JMPR Secretary, Appia Avenue 20, 1211 Geneva 27, Switzerland, E-mail: [vergerp@who.int](mailto:vergerp@who.int);
- Dr Xiongwu QIAO, CCPR Chair, Shanxi Academy of Agricultural Sciences, 2 Changfeng Street, Taiyuan, Shanxi Province, 030006, P.R. China, E-mail: [ccpr\\_qiao@agri.gov.cn](mailto:ccpr_qiao@agri.gov.cn), [ccpr@agri.gov.cn](mailto:ccpr@agri.gov.cn); and
- Secretariat, Codex Alimentarius Commission, Joint FAO/WHO Food Standards Programme, Viale delle Terme di Caracalla, 00153 Rome, Italy; E-mail: [codex@fao.org](mailto:codex@fao.org)).

Those countries and observers specified under individual compounds in REP15/PR, Appendix XII concerning matters related to the future JMPR meetings (GAPs, residue evaluation, intake assessment, etc.) on specific pesticide/commodity(ies) to be considered at subsequent years by JMPR, are invited to send information or data **one year before** JMPR considers these compounds at the addresses indicated above.

## SUMMARY AND CONCLUSIONS

The 47<sup>th</sup> Session of the Codex Committee on Pesticide Residues reached the following conclusions:

### MATTERS FOR ADOPTION BY THE 38<sup>TH</sup> SESSION OF THE COMMISSION

#### Draft and proposed draft MRLs for pesticides

- Proposed draft MRLs for pesticide at Steps 5 and 5/8 (with omission of Steps 6/7) (para 118 and Appendices III and IV);

#### Other matters for adoption / approval

- Maximum residue limits for pesticides recommended for revocation (para 118, Appendix V);
- Guidance to facilitate the establishment of maximum residue limits for pesticides for minor crops (including Appendix on Methodology to assign Crops into Consumption Categories) (for inclusion as an Annex to the *Risk Analysis Principles Applied by the Codex Committee on Pesticide Residues*) (para 155, Appendix XI, Part A).
- Codex schedules and priority list of pesticides for evaluation by JMPR (para 175, Appendix XII).

### MATTERS OF INTEREST TO THE COMMISSION

The Committee:

- noted matters referred to the Committee by the Commission and its subsidiary bodies and provided replies when appropriate in particular as to the monitoring of the implementation of the Codex Strategic Plan 2014-2019 (para 18, Appendix II);
- agreed to retain several draft and proposed draft MRLs for pesticides awaiting for JMPR evaluations or responses to concern forms (para 119, Appendices VI and VII);
- agreed to withdraw several draft and proposed draft MRLs for pesticides in view of the advancement of corresponding MRLs to the Commission for adoption (para 119, Appendix VIII);
- agreed to hold Group 015 – Pulses and Group 014 – Legume vegetables pending finalization of the *Classification of Food and Feed* in relation to the vegetable commodity groups and some pending issues related to the classification of commodities in these groups (paras 123 and 130, Appendices IX and X);
- agreed to further consider crop grouping for Group 011 - Fruiting vegetables, cucurbits, Group 020 – Grasses of cereal grains, Group 021 Grasses for sugars or syrup production and Group 024 Seeds for beverages and sweets at its next session as part of the ongoing revision of the *Classification of Food and Feed* (paras 130, 135 and 138);
- agreed to continue to work on examples of selection of representative commodities for vegetable and other commodity groups in parallel with the revision of the *Classification of Food and Feed* for inclusion in the *Principles and Guidance for the Selection of Representative Commodities for the Extrapolation of Maximum Residue Limits for Pesticides to Commodity Groups* (para 137);
- agreed to consider a discussion paper on the impact of the relocation of *Vigna* spp under the Beans (dry) on the CXLs for Peas (dry) at its the next session (para 122);
- agreed to further consider the proposed draft *Guidance for performance criteria for methods of analysis for the determination of pesticide residues* (para 144);
- agreed to make available the tables on the application of the Guidance to facilitate the establishment of maximum residue limits for pesticides for minor crops as an information document on the Codex website (para 155, Appendix XI, Part B);
- agreed to encourage member countries to work on the pilot project in the framework of the Global Minor Uses (GMU) Steering Committee in charge of the database and data-sharing (para 155); and
- agreed to request member countries to provide data to populate the GMU database which would allow the submission of proposals for MRLs for minor crops to the EWG on Priorities for inclusion in the CCPR Schedule and Priority List of Pesticide (para 155).

## INTRODUCTION

1. The 47<sup>th</sup> Session of the Codex Committee on Pesticide Residues (CCPR) was held in Beijing, China, from 13 to 18 April 2015 at the kind invitation of the Government of China. Professor Xiongwu QIAO, Vice-Director of the Shanxi Academy of Agricultural Science chaired the Session, assisted by Dr Guibiao YE, Director of CCPR Secretariat, Institute for Control of Agrochemicals, Ministry of Agriculture of the People's Republic of China. The Session was attended by representatives from 49 Member countries, one Member organisation, six international organisations and from FAO and WHO. The list of participants is attached as Appendix I.

## OPENING OF THE SESSION

2. The Session was opened by Mr Xinrong YU, Vice Minister, Ministry of Agriculture of the People's Republic of China. In his remarks, the Vice Minister expressed the appreciation of the Chinese Government for the work of the Codex Alimentarius Commission. The Vice Minister pointed out that China was committed to using less toxic pesticides and informed the Committee of some recent safety measures taken in the area of pesticides. Mr YU reaffirmed the commitment of China to continue collaborating with the Codex Alimentarius Commission and its Member countries in the development of international standards to protect the health of consumers and promote fair practices in international trade.
3. Dr Percy Wachata MISIKA, FAO Representative in China, also addressed the Committee on behalf of the Directors General of FAO and WHO and underscored the importance of CCPR in contributing to human health, environment, international food trade and its impact on food security and social wellbeing.

### Division of Competence<sup>1</sup>

4. The Committee noted the division of competence between the European Union and its Member States, according to paragraph 5, Rule II of the Procedure of the Codex Alimentarius Commission.

## ADOPTION OF THE PROVISIONAL AGENDA (Agenda Item 1)<sup>2</sup>

5. The Committee:
  - Adopted the Provisional Agenda as its Agenda for the Session;
  - Agreed to consider an update of the workshop organised by EFSA jointly with FAO, WHO and RIVM on the IESTI equation under Item 11; and
  - Agreed to establish an in-session WG chaired by USA and co-chaired by China and India to address comments submitted on the Guidance on performance criteria for method of analysis for the determination of pesticide residues in order to prepared a revised version for consideration by the plenary under Item 8.

## APPOINTMENT OF RAPPORTEURS (Agenda Item 2)

6. The Committee appointed Mr David LUNN (New Zealand) and Mr Kevin BODNARUK (Australia) to act as rapporteurs.

## MATTERS REFERRED TO THE COMMITTEE BY THE CODEX ALIMENTARIUS COMMISSION AND OTHER SUBSIDIARY BODIES (Agenda Item 3)<sup>3</sup>

7. The Committee noted that matters referred from CAC and its subsidiary bodies were mainly for information.

### Guidance on information documents

8. The Committee noted the guidance on information documents forwarded by CAC to all subsidiary bodies and that these types of documents could be used in future to assist member countries to better understand and implement texts developed by CCPR.

### Annex on practical examples on sampling

9. As regards the request of CCPR to CCMAS regarding work on the development of practical examples on sampling plans related to, amongst others, pesticide residues, the Committee noted that CCMAS work would not interfere with sampling and testing procedures developed by CCPR and other relevant committees and that the examples developed by CCMAS showed how samples taken according to the procedures developed by the committees concerned could be used for the decision making process.

---

<sup>1</sup> [CRD1](#).

<sup>2</sup> [CX/PR 15/47/1](#).

<sup>3</sup> [CX/PR 15/47/2](#); Comments of Brazil, Ecuador, Japan, AU ([CRD3](#)); Draft response to the 2014-2019 Strategic Plan Implementation prepared by the Codex and CCPR Secretariats ([CRD6](#)).

### **Codex Strategic Plan 2014-2019**

10. The Committee considered the responses on the implementation of the Strategic Plan based on a draft prepared by the Codex and CCPR Secretariats, which took into account the comments submitted to this session.

11. The Committee noted the following comments and made changes to the proposed responses as follows:

#### Activity 2.1.1

12. A reference to CCPR schedules and priority list of pesticides was added as another way to request scientific advice from JMPR in addition to submission of concern forms.

13. The Delegation of Brazil, supported by Chile, pointed out that CCPR should make an effort to ensure consistent use of risk analysis principles and scientific advice as stated in the Strategic Plan.

#### Activity 2.1.3

14. A reference to the Procedural Manual, the Codex Mandate and legitimate factors was added to emphasise the conduct of CCPR work in the development of risk management principles and guidelines.

#### Activities 3.1.5 and 4.1.5

15. The delegations of Brazil, Chile and Paraguay stated that PWGs and in-session WGs established by CCPR should work in all the available official languages of CAC to facilitate the participation of all member countries.

16. The Chairperson noted that China would explore the possibility to allocate additional resources to provide for interpretation services in the three working languages of CCPR when holding WGs prior to / during the plenary session.

17. The Delegation of Cameroon noted that the Guidelines for Physical and Electronic Working Groups contained provisions regarding the use of languages and cautioned the Committee against taking such a decision as this could create a burden on other host country secretariats which might not have the necessary resources to provide this service.

### **Conclusion**

18. The Committee agreed to forward the responses to CCEXEC and CAC for consideration (Appendix II).

### **MATTERS OF INTEREST ARISING FROM FAO AND WHO (Agenda Item 4a)<sup>4</sup>**

19. The Representative of WHO informed the Committee on FAO and WHO activities other than activities of JMPR, relevant to the work of CCPR.

20. In addition, the Representative noted the participation of two delegates supported by the CTF and thanked member countries for their contributions to the CTF. He highlighted two side events to be organised around the JMPR in September 2015:

- An expert workshop organised in collaboration with EFSA on the IESTI equation (Item 11);
- A round table for the general public to explain the scientific approach for chemical risk assessment with participation of JMPR experts. This event will be organised in the context of the World Food Expo 2015 in Milan (Italy).

21. The Representative recommended the Committee to use the GEMS/Food website to submit pesticide monitoring data to be collected in support of EMRLs. This should decrease the burden of work for JMPR experts and will ensure the sustainability of data storage. He also informed the Committee about the improved accessibility to data on JMPR assessments and Codex MRLs through the *Pesticide dashboard* available on: <http://www.who.int/foodsafety/databases/en/>.

### **MATTERS OF INTEREST ARISING FROM OTHER INTERNATIONAL ORGANISATIONS (Agenda Item 4b)<sup>5</sup>**

#### **Organisation for Economic Cooperation and Development (OECD)**

22. The Committee noted information provided by OECD relevant to the work of CCPR.

#### **Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture**

23. The Committee noted information provided by the Representative of the Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture relevant to the work of CCPR.

<sup>4</sup> [CX/PR 15/47/3](#); Comments of Kenya, AU ([CRD4](#)); Nigeria ([CRD13](#)).

<sup>5</sup> [CX/PR 15/47/4](#); [CX/PR 15/47/4-Add.1](#); Comments of Kenya, AU ([CRD4](#)); Nigeria ([CR13](#)).

24. In particular, the Representative highlighted the following key activities of the Joint Division to assist member countries in addressing their food safety and security needs through the application of nuclear techniques.
- By building much needed food safety monitoring capacity using nuclear and related techniques and providing support and assistance to member countries through a variety of projects involving information and technology transfer, training workshops, fellowships and scientific/expert missions and assistance with procurement of both modern analytical equipment and consumables. Outcomes include improved global marketability by ensuring compliance with international food safety standards, creation of high skill jobs in participating countries, better use of pest control agents and veterinary drugs and an increased production of safe and nutritious food globally.
  - By providing expertise and encouraging cooperation between scientists in both developing and developed countries through coordinated research projects for researching and developing tools to resolve emerging problems in food safety and security.
  - By creating regional networks of laboratories for monitoring and ensuring safety of food products thereby encouraging regional cooperation and technology transfer and promoting cooperative efforts in resolving regional problems.
  - By publishing a database of detailed screening, quantitative and confirmatory analytical methods for analysis of food contaminants, including pesticides (<http://nucleus.iaea.org/fcris/Default.aspx>). Also included is the PAD, for food safety/environmental laboratories and including links to Codex and other international MRL and pesticide physical, chemical and toxicological properties databases thereby making information of importance to food safety and security easily accessible.
  - By assisting and contributing to the preparation/finalisation of the proposed draft Performance Criteria for Suitability Assessment of Methods of Analysis for Pesticide Residues, and training member countries in analytical method development and validation to internationally acceptable standards.

#### **REPORT ON ITEMS OF GENERAL CONSIDERATION BY THE 2014 JMPR (Agenda Item 5a)<sup>6</sup>**

25. The Committee noted the information contained in Section 2 of the 2014 JMPR and, in particular, noted the following comments and remarks:
- Items 2.1 - 2.6**
26. The JMPR Secretariat informed the Committee about the publication of the new guidance document prepared by the WHO core group adopted by the 2014 JMPR including a modified scheme for the TTC approach. The JMPR Secretariat noted that the guidance reflected the current practices of the expert body as a matter of transparency and was not a new procedure in particular regarding the use of the TTC.
27. The JMPR Secretariat also informed the Committee about the standing agenda item on update of Principles and Methods for the Risk Assessment of Chemicals in Food (EHC 240). A delegation questioned the lack of consistency between WHO bodies i.e. JMPR and IARC regarding the carcinogenicity of glyphosate. The WHO Representative replied that the roles of JMPR and IARC were different, IARC performing hazard classification independently of chemical mode of action and without exposure assessment while JMPR was doing risk assessment at the exposure level resulting from proposed MRLs in food commodities. WHO was currently working to improve communication in that respect. The FAO Representative indicated that the IARC publication had already had consequences on pesticide regulatory bodies. The Committee noted that WHO would follow up on this matter.
28. The JMPR Secretariat further informed the Committee about the absence of submission in 2014 and 2015 of data from new mechanistic-based approaches and asked the Committee if such a request should remain in future JMPR calls for data. Several delegations responded that the objective of using such data remained, even if at this stage they should not be part of the JMPR assessment. The Committee agreed to keep the request in the call for 2016 and if data were submitted, JMPR should analyse them and make recommendations on the way forward.
29. In addition, the JMPR Secretariat informed the Committee about the considerations regarding cumulative risk assessment and its possible applicability to the JMPR procedure. He noted that none of the existing approaches could be implemented to date but further discussions could be expected in future as a function of possible relevant developments.

---

<sup>6</sup> [Section 2 of the 2014 JMPR Report](#); Comments of China, EU, Ghana, Kenya, AU ([CRD5](#)); Nigeria ([CRD13](#)); USA ([CRD15](#)).

30. The JMPR Secretariat also referred to future developments to improve the characterisation of chronic risks expected to occur for exposure during less than life-time. An upcoming meeting organised jointly by JECFA and JMPR Secretariats would be convened. The Committee supported this initiative and the development of an approach for appropriate scenarios.
31. The JMPR Secretariat further mentioned the possible waste of time of the experts related to the submission of incomplete data package. The JMPR suggested that sponsors should include in the data package a declaration of data completeness. A delegation noted that such a declaration was already implicit during the process of prioritisation. The Committee concluded that completing such a declaration should be considered by individual sponsors.

#### **Items 2.7 - 2.10**

32. The JMPR Secretariat informed the Committee of the 2014 JMPR feedback on the draft Guidance document of MRLs for pesticides for minor crops prepared by CCPR46. The JMPR Meeting reiterated its general practices in estimating MRLs for minor crops which are scientific judgement and case-by-case. Further information or clarification would be provided under Item 9.
33. The JMPR Secretariat also informed the Committee that the 2014 JMPR had made further consideration of the process for establishing group MRLs and confirmed the criteria established by the 2013 JMPR including the approach of using the 5-times rule. The JMPR Meeting highlighted the need of having the data for those representative commodities of the subgroups.
34. The Delegation of EU supported the JMPR approach in general and was of the view that when possible the 5-times rule could be omitted and the process could start directly with a statistical test. The Delegation commented that the MRLs calculated with the OECD calculator should be similar for individual commodities when combining them to propose a group MRL.
35. The Delegation of USA pointed out that they used the 5-times rules in a different way as compared to JMPR. The Delegation indicated that they were preparing a proposal for OECD to develop a harmonised approach and suggested that JMPR could contribute to this work.
36. The Committee noted the work that would be proposed to the OECD on calculation of group MRLs and encouraged the JMPR Secretariat to follow-up on this discussion in order to ensure timely information sharing between OECD and JMPR with a view to facilitating a common approach for the establishment of group MRLs.
37. The JMPR Secretariat informed the Committee that the 2014 JMPR had confirmed that kumquat could be included in the citrus group.
38. The JMPR Secretariat informed the Committee about the replacement of the 13 cluster diets by the new 17 cluster diets<sup>7</sup> after a modelling of the data to fit for purpose of JMPR.
39. Delegations welcomed the new cluster diets. The Delegation of Kenya requested support for the facilitation of a regional workshop on this topic and in particular the conduct of total dietary studies to support data submission from African countries. The Delegation of EU noting that their region was represented by five clusters indicated that they were making further tests to verify if the outcomes of new clusters were representative for the EU Members States.

#### **REPORT ON 2014 JMPR RESPONSES TO SPECIFIC CONCERNS RAISED BY CCPR (Agenda Item 5b)<sup>8</sup>**

40. The Committee noted that specific concerns raised by CCPR would be addressed when discussing the relevant compounds under Item 6.

#### **DRAFT AND PROPOSED DRAFT MAXIMUM RESIDUE LIMITS FOR PESTICIDES IN FOOD AND FEED AT STEPS 7 AND 4 (Agenda Item 6)<sup>9</sup>**

##### **General remarks**

41. The Delegation of EU advised the Committee that they would be introducing reservations for a number of proposed draft and draft MRLs during the discussions on the individual compounds and that the reasons for these reservation were outlined in CRD5 and CRD7.
42. The Committee agreed that these reservations, where relevant, would be noted in the report.

<sup>7</sup> [http://www.who.int/foodsafety/areas\\_work/chemical-risks/gems-food/en7](http://www.who.int/foodsafety/areas_work/chemical-risks/gems-food/en7)

<sup>8</sup> Section 3 of the 2014 JMPR Report; Comments of EU (CRD5).

<sup>9</sup> CX/PR 15/47/5; Comments of Australia, Canada (CX/PR 15/47/5-Add.1); China, EU, Indonesia, Iran, Kenya, Philippines, USA, AU (CRD7).

43. The Delegation of the EU further noted that it was current EU policy to align EU MRLs with Codex MRLs (CXLs) in cases where no reservations were made. The Delegation of EU also noted that for a number of compounds, JMPR had evaluated the potential carry-over of residue into rotational crops and in the interest of harmonisation invited JMPR to consider the outcome of current work of the OECD Expert Group on Pesticide Residue Chemistry in developing a "Guidance Document on Rotational Crop Field Trials" for its evaluation.

#### **DIQUAT (31)**

44. The Committee noted that proposed draft maximum residue limits for beans, dry and for livestock commodities at Step 4 and CXLs were retained awaiting data from Canada and Australia.

#### **CHLORPYRIFOS-METHYL (90)**

45. The Committee noted the advice from the 2014 JMPR that the residue trials conducted on wheat used lower rates than the critical GAP in Australia and that there is currently not sufficient evidence to support the use of the proportionality approach for post-harvest treatments. As a result, JMPR proposed the withdrawal of the MRLs of 5 mg/kg (Po) for cereal grains, except maize and rice; 1.5 mg/kg for rice, husked and 0.2 mg/kg for rice, polished.
46. Australia informed the Committee that they would provide new GAP information and requested that the proposed draft MRLs be retained under the 4-year rule. The Committee agreed to maintain all the proposed draft MRLs and CXLs awaiting new GAP information from Australia and re-assessment by JMPR.

#### **PHOSMET (103)**

47. The Committee agreed to advance the proposed draft MRL for cranberry for adoption at Step 5/8.

#### **DITHIOCARBAMATES (105)**

48. The Committee decided to advance the proposed draft MRLs for cardamom; coriander, seed; cumin seed; fennel seed; ginseng; ginseng, dried including red ginseng; pepper, black, white; peppers chili; and peppers chili, dried for adoption at Step 5/8, with the subsequent revocation of the associated CXL for pepper chili, dried.
49. The Delegation of EU expressed a reservation related to the draft MRL for cumin seed because the origin of the residue was unknown and that the dietary intake risk should have been based on the toxic endpoints for Ziram (worst case). The Delegation of India informed the Committee that Ziram did not have a label claim for the use in cumin while Mancozeb (50) is the commonly used dithiocarbamate on cumin seed in India.

#### **TRIFORINE (116)**

50. The Committee decided to advance all the proposed draft MRLs for adoption at Step 5/8, with the subsequent revocation of the associated CXLs.
51. The Committee agreed to revoke the existing CXLs for brussels sprouts; cereal grains; cherries; common bean (pods and/or immature seeds); currants, black, red, white; fruiting vegetables, cucurbits; gooseberry; peach; plums (including prunes) and strawberry.
52. The Committee noted the reservation of the Delegation of EU on all the proposed draft MRLs because of differing residue definition policies.

#### **OXAMYL (126)**

53. The Committee noted that the draft MRLs for citrus fruit; cucumber; melons, except watermelon and peppers were retained at Step 7 awaiting the 2017 JMPR periodic review.

#### **TRIADIMEFON (133)**

54. The Committee agreed to align the draft MRLs for Triadimefon and Triadimenol by introducing an MRL of 0.3 mg/kg for Triadimefon on grapes at Step 5/8 and replacing the existing CXL of 10 mg/kg for dried grapes with a new proposal of 1 mg/kg also at Step 5/8(see Triadimenol (168)).

#### **PROPAMOCARB (148)**

55. The Committee agreed to advance the proposed draft MRLs for broccoli; brussels sprouts; cauliflower; eggs; leek; onion, bulb; poultry fats; poultry meat; poultry, edible offal of; for adoption at Step 5/8, with the subsequent revocation of the associated CXLs.

56. The Committee noted the reservation of the Delegation of EU on the advancement of the proposed draft MRLs for cabbage head; kale (including among others: collards, curly kale; Scotch kale, thousand-headed kale; not including Marrow-stern kale); eggs; poultry fats; poultry meat; poultry, edible offal of; and leek; because of the different residue definitions (poultry commodities), an acute intake risk (leeks) because of the lower ARfD established in the EU, and a different policy on establishing MRLs for animal feed commodities (cabbage head; kale (including among others: Collards, Curly kale; Scotch kale, thousand-headed kale; not including Marrow-stern kale)) when livestock dietary burdens exceed the dose levels used in animal feeding studies.
57. The Committee agreed to hold the proposed draft MRLs for cabbages, head; kale (including among others: collards, curly kale, Scotch kale, thousand-headed kale; not including marrow-stem kale) at Step 4, awaiting new data (livestock feeding study) from the manufacturer and re-evaluation by JMPR in 2018.

#### **PROPICONAZOLE (160)**

58. The Committee agreed to advance the proposed draft MRLs for barley straw and fodder, dry; edible offal (mammalian); mammalian fats (except milk fats); meat (from mammals other than marine mammals); milks; oat straw and fodder, dry; rye straw and fodder dry; triticale straw and fodder, dry; wheat straw and fodder, dry for adoption at Step 5/8, with the subsequent revocation of the associated CXLs.
59. The JMPR Secretariat noted the concern expressed by the Delegation of USA on the assessment of cereal data and informed the Committee that the data would be reassessed by the 2015 JMPR.

#### **TRIADIMENOL (168)**

60. The Committee agreed to advance the proposed draft MRLs for dried grapes (=currants, raisins and sultanas) and grapes for adoption at Step 5/8, with the subsequent revocation of the associated CXL (see also TRIADIMEFON (133)).

#### **BUPROFEZIN (173)**

61. The Committee agreed to advance the proposed draft MRL for coffee beans for adoption at Step 5/8, noting the reservation of the Delegation of EU about the potential formation of toxicologically relevant degradation products during coffee processing.
62. The JMPR Secretariat informed the Committee that this question on the presence of toxicologically significant metabolites in processed commodities would be considered by the 2015 JMPR.

#### **GLUFOSINATE-AMMONIUM (175)**

63. The Committee agreed to advance the proposed draft MRL for soya bean (dry) for adoption at Step 5/8, with the subsequent revocation of the associated CXL and the withdrawal of the related draft MRL.

#### **BIFENTHRIN (178)**

64. The Committee agreed to retain the draft MRLs for mango; okra and papaya at Step 7 and the proposed draft MRL for strawberry at Step 4, awaiting review by the JMPR.

#### **MYCLOBUTANIL (181)**

65. The Committee noted that the concern form submitted by the Delegation of USA, relating to the proposed replacement of the stone fruit group CXL with different sub-group MRLs and the application of a 5X median range factor when considering sub-group MRLs had already been discussed earlier (see Item 5a).
66. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8, with the subsequent revocation of the associated CXLs for currant, black; eggs; hops, dry; plums (including prunes); pome fruits; poultry meat; poultry, edible offal of; stone fruits; strawberry and tomato. The Committee also agreed to withdraw the CXLs for banana; currant, black and prunes as recommended by the JMPR.
67. The Delegation of EU expressed a reservation on the advancement of the proposed draft MRLs for peaches (including nectarine and apricots) due to different policies on extrapolation used by JMPR and in EU, and for peppers due to different policies on data requirements applied by JMPR and EU.

#### **FENPROPATHRIN (185)**

68. The Committee noted the concern form submitted by USA as to why the proportionality approach was not used to recommend a MRL on raspberry. The JMPR Secretariat responded that the proportionality approach could not be applied in this instance as the data did not meet the current CCPR criteria. The Delegation of the USA requested further consideration of this issues at the 2015 JMPR and would submit further information to strengthen the argument in the Concern Form.

69. The Committee agreed to advance the proposed draft MRLs for almond hulls; citrus fruits; citrus oil, edible; coffee beans; edible offal (mammalian); eggs; mammalian fats (except milk fats); meat (from mammals other than marine mammals); milks; peppers; peppers chili, dried; plums (including prunes); poultry fats; poultry meat; poultry, edible offal of; prunes; soya bean (dry); strawberry; tea, green, black, (black, fermented and dried); tomato; and tree nuts for adoption at Step 5/8, with the subsequent revocation of the associated CXLs, and also to recommend revocation of the CXLs for cattle meat; cattle milk; cattle, edible offal of; cotton seed; cotton seed oil, crude; eggplant; gherkin; grapes as recommended by JMPR 2014.
70. The Committee agreed to advance the proposed draft MRLs for cherries; peaches (including nectarine and apricots) (includes all commodities in this subgroup); and pome fruits to Step 5, in light of acute intake risks identified by JMPR in 2014 and await advice on the availability of an alternative GAP.
71. The Committee noted the reservation of the Delegation of EU on the advancement of MRLs for cherries; citrus fruits; coffee beans; edible offal (mammalians); eggs; mammalian fats (except milk fats); meat (from mammals other than marine mammals); milks; peaches(including nectarine and apricots); pome fruit; plums; peppers; poultry fats; poultry meat; poultry, edible offal of; soya bean (dry);strawberry; tea, green, black, (black fermented and dried); tomato; tree nuts due to the lack of data on the technical specifications of the active substance used to derive the reference values and the residue definition. The Delegation of EU also expressed a reservation on the advancement of the proposed draft MRLs for peppers and tomatoes due to acute intake concerns.

#### **TEBUCONAZOLE (189)**

72. The Committee agreed to maintain the draft MRL for common bean (pods and/or immature seeds) at Step 7, awaiting data submission to JMPR.
73. The Committee also decided to withdraw the draft MRL for watermelon as recommended by the 2014 JMPR.

#### **PYRACLOSTROBIN (210)**

74. The Committee agreed to advance the proposed draft MRLs for cherries; peaches (including nectarine and apricots) (includes all commodities in this subgroup); and plums (including prunes) for adoption at Step 5/8, with the subsequent revocation of the associated CXLs.
75. The Committee noted the reservation of the Delegation of EU on the MRL for apricots due to the different extrapolation policies followed by EU and the JMPR.

#### **METALAXYL-M (212)**

76. The Committee agreed to retain all the draft MRLs for Metalaxyl-M at Step 7, awaiting the outcome of the Metalaxyl periodic re-evaluation scheduled for 2017.

#### **DIFENOCONAZOLE (224)**

77. The Committee agreed to withdraw the draft MRL for papaya due to the lack of alternative GAP information.

#### **DIMETHOMORPH (225)**

78. The Committee agreed to retain the proposed draft MRL for lettuce, leaf at Step 4 in light of acute intake risks identified by the 2014 JMPR and await submission of alternative GAP information for further evaluation by the JMPR.
79. The Committee agreed to advance all the remaining proposed draft MRLs for adoption at Step 5/8 with the subsequent revocation of the associated CXLs.
80. The Delegation of EU expressed a reservation on the advancement of the proposed draft MRL for fruiting vegetables other than cucurbits because of different extrapolation policies used by the JMPR and in EU and for beans due to concerns on the maturity stage of the commodity under concern.

#### **CHLORANTRANILIPROLE (230)**

81. The Committee agreed to advance the proposed draft MRLs for citrus fruits; mammalian fats (except milk fats); poultry fats; and soya bean (dry) for adoption at Step 5/8, with the subsequent revocation of the associated CXL for citrus fruits.

#### **PROTHIOCONAZOLE (232)**

82. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8, noting the reservation of the Delegation of EU on the proposed draft MRLs for bush berries and fruiting vegetables, cucurbits (except watermelon) because of the differing residue definitions and ARfDs used by the JMPR and established in EU.

**SPIROTETRAMAT (234)**

83. The Committee noted the response from JMPR to the concern form submitted by USA relating to the 2013 JMPR recommendation to not recommend MRLs for pineapples and pomegranates, because no information was available on the stability of residues in fruit samples that were cut in the field. The 2014 JMPR confirmed its previous conclusion that cutting whole fruits and vegetables in the field makes uncertain the validity of the results, unless the stability of residues has been demonstrated.

**SPIRODICLOFEN (237)**

84. The Committee agreed to advance the proposed draft MRLs for avocado and blueberries for adoption at Step 5/8.

**CLOTHIANIDIN (238)**

85. The Committee agreed to advance the proposed draft MRLs for avocado; beans, except broad bean and soya bean; hops, dry; mango and mints for adoption at Step 5/8.

**FLUOPYRAM (243)**

86. The Committee agreed to retain the proposed draft MRLs for peppers and peppers chili, dried at Step 4, awaiting new data and decided to advance the proposed draft MRLs for asparagus; blackberries; broccoli; brussels sprouts; cabbages, head; cauliflower; garlic; leek; lettuce, head; lettuce, leaf; onion, bulb; peaches (including nectarine and apricots) (includes all commodities in this subgroup); plums (including prunes); rape seed and raspberries, red, black for adoption at Step 5/8, with the subsequent revocation of the associated CXL for peach.
87. The Delegation of Kenya stated that they had some concerns with respect to the acute intake risk for children from the consumption of leaf lettuce (100% of the ARfD).

**THIAMETHOXAM (245)**

88. The Committee agreed to advance the proposed draft MRLs for avocado; beans, except broad bean and soya bean; hops, dry; mango and mints for adoption at Step 5/8.

**EMAMECTIN BENZOATE (247)**

89. The Committee was informed that a new ARfD of 0.02mg/kg body weight was established by the 2014 JMPR, and noted the reservation of the Delegation of EU on the end-points used to derive this ARfD.
90. The Committee agreed to advance the proposed draft MRLs for cos lettuce; lettuce, leaf; rape seed and tree nuts for adoption at Step 5/8, with the subsequent revocation of the associated CXLs for cos lettuce and lettuce, leaf.

**SULFOXAFLOL (252)**

91. The Committee agreed to advance the proposed draft MRLs for cherries; lemons and limes (including Citron); mammalian fats (except milk fats); mandarins (including mandarin-like hybrids); oranges, sweet, sour (including orange-like hybrids); several cultivars; peaches (including nectarine and apricots) (including all commodities in this subgroup); plums (including prunes); pome fruits, poultry fats, pummelo and grapefruit for adoption at Step 5/8.
92. The Committee agreed to withdraw the proposed draft MRLs at Step 4 for citrus fruits, pome fruits and stone fruits as proposed by the 2014 JMPR.
93. The Committee noted the general reservation expressed by the Delegation of EU because the evaluation of SulfoxafloL was still ongoing in the EU.
94. The Committee decided to retain the proposed draft MRL for tree nuts at Step 4 awaiting JMPR evaluation in 2016.

**PENTHIOPYRAD (253)**

95. The Committee agreed to maintain the proposed draft MRLs for maize fodder (dry) and mustard greens at Step 4, awaiting submission of data for evaluation by the 2016 JMPR.

**SEDAXANE (259)**

96. The Committee agreed to advance all the proposed draft MRLs for adoption to Step 5/8, with the subsequent revocation of the associated CXLs as recommended by the 2014 JMPR.

**BENZOVINDIFLUPYR (261)**

97. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8, noting the general reservation expressed by the Delegation of EU because the EU evaluation had not been finalised.

**FENAMIDONE (264)**

98. The Committee agreed to retain the proposed draft MRLs for mustard greens and spinach at Step 4 because of acute intake risks identified by the 2014 JMPR and await advice on the availability of alternative GAP information.
99. The Committee agreed to advance all other proposed draft MRLs for adoption at Step 5/8.
100. The Delegation of EU expressed reservations on the advancement of the proposed draft MRLs for flowerhead brassicas and fruiting vegetables other than cucurbits (except chili pepper, fungi, sweet corn) due to differing extrapolation rules applied in EU and by the JMPR.

**FLUENSULFONE (265)**

101. The Committee agreed to advance all the proposed MRLs for adoption at Step 5/8.
102. The Committee noted the reservation of the Delegation of EU on the MRLs for fruiting vegetables, cucurbits; and fruiting vegetables, other than cucurbits (except sweet corn and mushrooms) relating to the use of non-GLP studies in assessing the toxicological relevance of the metabolites BSA and TSA, and the use of the TTC approach, a methodology still under review in the EU.
103. The JMPR Secretariat responded that the critical information on which JMPR based the assessment was from GLP studies and in particular, this was the case for the 90-day rat study upon which the assessment of the TSA metabolite was based.

**TOLFENPYRAD (269)**

104. The Committee noted that the response in the 2014 JMPR Report to a concern from the Delegation of USA relating to end-points used by the JMPR to establish an ARfD for tolfenpyrad provided additional clarification and confirmed the ARfD of 0.01 mg/kg bw.

**AMINOCYCLOPYRACHLOR (272)**

105. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8.
106. The Delegation of EU expressed a reservation on the advancement of the proposed draft MRLs for edible offal (mammalian); mammalian fats (except milk fats); meat (from mammals other than marine mammals); and milks due to questions over potential genotoxicity and metabolism for the metabolite CPCA.
107. The JMPR Secretariat responded that this metabolite was considered by JMPR but was not detected in an aerobic/anaerobic soil metabolism study or in a goat metabolism study. CPCA was detected as a possible artefact in the grass metabolism study.

**CYFLUMETOFEN (273)**

108. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8 as recommended by the 2014 JMPR.

**DICHLORBENIL (274)**

109. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8, noting the reservation of the Delegation of EU on the proposed draft MRLs for brassica (cole or cabbage) vegetables, head cabbage, flowerhead brassicas; cane berries; celery; cereal grains; fruiting vegetables, cucurbits; fruiting vegetables, other than cucurbits (except sweet corn and mushrooms); grapes; leafy vegetables; mammalian fats (except milk fats); meat (from mammals other than marine mammals); milks; onion, bulb; onion, welsh; pulses; edible offal (mammalian); eggs; poultry, edible offal of; poultry fats and poultry meat.
110. These reservations related to the approaches used when considering the significance of the 2,6-dichlorobenzamide in soil (rotational crops) and in livestock, and the use of the poultry metabolism study to derive MRLs for poultry commodities.

**FLUFENOXURON (275)**

111. The Committee agreed to advance all the proposed draft MRLs for adoption at Step 5/8.

112. The Delegation of EU expressed a reservation to the advancement of the proposed draft MRLs relating to the residue definitions in plant and animal commodities, the lack of a dietary burden calculation and the possible presence of the degradate Reg. No 4064702 in tea infusions.
113. The JMPR Secretariat responded that the JMPR and the EU had differing approaches to the establishment of residue definitions, and that for tea, the hydrolysis study, carried out under conditions similar to processing did not result in the formation of N-[4-[2-chloro-4-(trifluoromethyl) phenoxy]-2-fluorophenyl]urea.

#### **IMAZAMOX (276)**

114. The Committee agreed to advance all proposed draft MRLs for adoption at Step 5/8 as recommended by 2014 JMPR.
115. The Committee noted the concern expressed by the Delegation of USA on the establishment of the ARfD. The JMPR Secretariat responded that the differences resulted from differing interpretations of the data and that dietary exposure was negligible. The Committee noted that the Concern Form on this issue would be submitted at the JMPR.

#### **MESOTRIONE (277)**

116. The Committee agreed to advance all proposed draft MRLs for adoption at Step 5/8 as recommended by the 2014 JMPR, noting the reservation by the Delegation of EU on the proposed draft MRLs on asparagus; bush berries; cane berries; cranberry; edible offal (mammalian); eggs; meats (from mammals other marine mammals); milks; okra; poultry, edible offal of; poultry meat; rhubarb and sugar cane due to different residue definitions established by JMPR and in the EU.

#### **METRAFENONE (278)**

117. The Committee decided to advance all the proposed draft MRLs for adoption at Step 5/8 as recommended by 2014 JMPR.

#### **Status of the Maximum Residue Limits for Pesticides**

118. The Committee agreed to forward to CAC:
- Proposed draft MRLs for adoption at Steps 5/8 (Appendix III).
  - Proposed draft MRLs for adoption at Step 5 (Appendix IV).
  - Codex MRLs for revocation (Appendix V).
119. The Committee noted that:
- Draft and proposed draft MRLs retained at Steps 7 and 4 are attached as Appendices VI and VII.
  - Draft and proposed draft MRLs withdrawn are attached as Appendix VIII.

#### **DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: SELECTED VEGETABLE COMMODITY GROUPS – GROUP 015 PULSES (Agenda Item 7a)<sup>10</sup>**

120. The Delegation of USA, as Chair of the EWG on the revision of the Classification, introduced the item and informed the Committee that a revised version had been prepared by the EWG Chair based on the comments submitted to this session.

#### **Discussion**

121. The Committee agreed to consider the revised pulses classification and noted the following views:
- To classify pulses into two sub-groups i.e.
    - 015A – Dried beans, and
    - 015B – Dried peas.
  - To consider relocating Bambara groundnut and Kersting groundnut (and possibly peanuts) in a separate sub-group either within the pulses group or elsewhere in the Classification since the edible part of these species developed underground therefore GAPs, potential residues and residues behaviour may differ from other commodities.

<sup>10</sup> [CX/PR 15/47/6](#); Comments of Canada, Chile, Costa Rica, EU, Ghana, Kenya, USA, AU ([CX/PR 15/47/6-Add.1](#)); China, India, Indonesia, Japan, Morocco, Thailand ([CRD8](#)); Nigeria ([CRD13](#)); Cameroon ([CRD16](#)); Revised Group 015 Pulses, prepared by the Chair of the EWG on the Classification ([CRD18](#)).

- To consider the implications of classifying all *Vigna* spp under the beans (dry) sub-group on existing CXLs established for *Vigna* spp. currently classified as peas (dry). In this regard, the Committee recalled its earlier decision<sup>11</sup> that no changes would be made to existing MRLs until such a time JMPR would revise them following the procedures in place for the establishment of Codex schedules and priority list of pesticides, and that the same approach would be taken when reviewing other commodity groups in the database following the adoption of revised commodity groups in the Classification.
- To revise a number of individual commodity names, codes and synonyms.

### Conclusion

122. The Committee:

- Noted general support for grouping pulses into two sub-groups 015A – Dried beans and 015B – Dried peas and therefore, agreed to retain these two sub-groups as the revised classification for pulses.
- Agreed to retain two separate codes for Beans (*Phaseolus* spp.) (dry) and Beans (*Vigna* spp.) (dry) and that Thailand would prepare a discussion paper on the impact of the relocation of *Vigna* spp under the Beans (dry) on the CXLs for Peas (dry) for consideration by the next CCPR.
- Agreed that the EWG would consider (see mandate of the EWG in paragraph 138):
  - options for the location of groundnuts, i.e. Bambara and Kerstin (and possibly peanuts) within the Classification system;
  - the question on single codes for different varieties of *Vicia faba* L. as well as the inclusion of synonyms for pigeon pea (dry) / peas (dry) for consideration by the next CCPR.

### STATUS OF THE DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: SELECTED VEGETABLE COMMODITY GROUPS – GROUP 015 PULSES

123. The Committee agreed to retain the draft Group 015 Pulses at Step 7 awaiting finalisation of the revision of the Classification as per the vegetable commodity groups (Appendix IX).

### PROPOSED DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: SELECTED VEGETABLE COMMODITY GROUPS – GROUP 014 LEGUME VEGETABLES and GROUP 011 FRUITING VEGETABLES, CUCURBITS (Agenda Item 7b)<sup>12</sup>

#### Group 014 – Legume vegetables

124. The Delegation of USA, as Chair of the EWG on the revision of the Classification, introduced the item and informed the Committee that a revised version of Group 014 – Legume vegetables had been prepared by the EWG Chair based on the comments submitted to this session.

### Discussion

125. The Committee agreed to consider the revised legume vegetables classification and noted the following views:

- To classify legume vegetables into 4 sub-groups i.e.
  - 014A Beans with pods
  - 014B Peas with pods
  - 014C Succulent beans without pods and
  - 014D Succulent peas without pods
- That options for the location of immature peanuts and immature Bambara groundnuts should be consistent with those to be proposed for similar (mature) commodities (see paragraph 121 above).
- To consider the implications of classifying all *Vigna* spp. under the beans sub-groups on the existing CXLs established for *Vigna* spp. currently classified as peas (see paragraph 121 above).

### Conclusion

126. The Committee:

<sup>11</sup> [REP13/PR, para 109](#).

<sup>12</sup> [CX/PR 15/47/7-Add.1](#); Comments of Canada, Chile, Costa Rica, EU, Ghana, Japan, Kenya, USA, AU ([CX/PR 15/47/7-Add.1](#)); China, India, Indonesia, Japan, Morocco, Thailand ([CRD8](#)); Nigeria ([CRD13](#)); Cameroon ([CRD16](#)); Revised Group 014 Legume vegetables, prepared by the Chair of the EWG on the Classification ([CRD19](#)).

- Noted general support for grouping legume vegetables into four sub-groups: 014A Beans with pods, 014B Peas with pods, 014C Succulent beans without pods and 014D Succulent peas without pods and therefore, agreed to retain these four sub-groups as the revised classification for legume vegetables.
- Agreed that the EWG would consider (see mandate of the EWG in paragraph 138):
  - Options for the location of immature Bambara groundnuts and immature peanuts within the Classification system (see paragraph 125 above).
- Agreed to retain two separate codes for Beans (*Phaseolus* spp.) immature and Beans (*Vigna* spp.) immature under Sub-groups 14A and 14C and that Thailand would prepare a discussion paper on the impact of the relocation of *Vigna* spp. under beans (immature) on the CXLs for peas (immature) for consideration by the next CCPR.

#### **Group 011 – Fruiting vegetables, cucurbits**

127. The Delegation of USA, as Chair of the EWG on the revision of the Classification, introduced the item and summarised the discussion that took place in the EWG for the crop grouping of fruiting vegetables, cucurbits. The Delegation explained that EWG could not reach agreement on the crop grouping and therefore 3 options were presented to the Committee for consideration:

- Option 1 – 3 sub-groups:
  - 11A Cucumber and summer squash
  - 11B Melons
  - 11C Winter squashes
- Option 2 – 2 sub-groups (in line with the ICGCC)
  - 11A Melons
  - 11B Squash/Cucumber sub-group
- Option 3 – 2 sub-groups
  - 11A Cucurbits with edible peel
  - 11B Cucurbits with inedible peel
- Option 4 – 2 sub-groups
  - 11A Cucumber and Melons
  - 11B Squashes (new option presented at this Session)

#### **Discussion**

128. Delegations expressed their willingness to find a compromise solution that would allow CCPR to decide on a revised classification for Group 011. The consideration of this matter in an EWG would provide sufficient time for in-country consultation in relation to implications of different crop grouping combinations in terms of additional residue data for generation of group MRLs, risk assessment (edible / inedible peel, cooked / uncooked product, etc.) that would aid to reach consensus on the different options for crop grouping.

#### **Conclusion**

129. After considerable discussion on the relative importance of the seven crop grouping criteria and the practical implications of having more sub-groups than necessary, the Committee concluded the following:

- No agreement could be reached at the present session on the grouping of Group 011 Fruiting vegetables, cucurbits.
- The issue should be put back to the EWG for further consideration in order to come up with one or two options for crop grouping for Group 011 for consideration by the next CCPR (see mandate of the EWG in paragraph 138).

#### **STATUS OF THE PROPOSED DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: SELECTED VEGETABLE COMMODITY GROUPS – GROUP 011 FRUITING VEGETABLES, CUCURBITS AND 014 LEGUME VEGETABLES**

130. The Committee agreed to:

- Retain the proposed draft Group 014 Legume vegetables at Step 4 awaiting finalisation of the revision of the Classification as per the vegetable commodity groups (Appendix X).
- Return the proposed draft Group 011 Fruiting vegetables, cucurbits to Step 2/3 for further discussion, comments and consideration by the next session of the Committee.

**PROPOSED DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: OTHER COMMODITY GROUPS –020 GRASSES OF CEREAL GRAINS (Agenda Item 7c) <sup>13</sup>**

131. The Delegation of USA, as Chair of the EWG on the revision of the Classification, introduced the item and summarised the discussion that took place in the EWG for Group 020 – Grasses of cereal grains. The Delegation explained that the EWG could not reach agreement on the crop grouping and therefore two options were presented to the Committee for consideration:
- Option 1 – 3 sub-groups
    - 20A Small grains
    - 20B Corn, grain sorghum and millet
    - 20C Rice
  - Option 2 – 6 sub-groups
    - 20A Wheat
    - 20B Barley
    - 20C Rice
    - 20D Maize, millet, sorghum
    - 20E Pseudocereals grains
    - 20F Sweet corn

**Discussion**

132. The Committee noted general agreement that sweet corn (filed corn) would be included under a separate sub-group and that rice would be kept in a separate sub-group.
133. The Committee noted several possible combinations for Option 2 based on the application of the criteria for crop grouping e.g. and the possibility for extrapolation of residue data to the sub-group. The Committee however could not come to an agreement on how to narrow down the differences between the different options.

**Conclusion**

134. The Committee agreed to request the EWG to also look into the crop grouping of Group 020 and report back to the next CCPR on an agreed proposal for consideration (see mandate of the EWG in paragraph 138).

**STATUS OF THE PROPOSED DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED: OTHER COMMODITY GROUPS – GROUP 020 GRASSES OF CEREAL GRAINS**

135. The Committee agreed to return the proposed draft Group 020 Grasses of cereal grains to Step 2/3 for further discussion, comments and consideration by the next session of the Committee.

**PROPOSED DRAFT TABLES 2 (VEGETABLE COMMODITY GROUPS) AND 3 (GRASSES – CEREAL GRAINS) EXAMPLES OF SELECTION OF REPRESENTATIVE COMMODITIES (FOR INCLUSION IN THE PRINCIPLES AND GUIDANCE FOR THE SELECTION OF REPRESENTATIVE COMMODITIES FOR THE EXTRAPOLATION OF MRLs FOR PESTICIDES FOR COMMODITY GROUPS) (Agenda Item 7d) <sup>14</sup>**

136. In view of the discussion on the Classification, the Committee agreed not to discuss this item awaiting the finalisation of the commodity groups under consideration by the EWG on the Classification.

**STATUS OF THE PROPOSED DRAFT TABLES 2 (VEGETABLE COMMODITY GROUPS) AND 3 (GRASSES OF CEREAL GRAINS) EXAMPLES OF SELECTION OF REPRESENTATIVE COMMODITIES (FOR INCLUSION IN THE PRINCIPLES AND GUIDANCE FOR THE SELECTION OF REPRESENTATIVE COMMODITIES FOR THE EXTRAPOLATION OF MAXIMUM RESIDUE LIMITS FOR PESTICIDES FOR COMMODITY GROUPS)**

137. The Committee agreed to return the proposed Tables to Step 2/3 for further discussion, comments and consideration by the next session of the Committee.

**Mandate of the EWG on the revision of the Classification**

138. The Committee agreed to re-establish the EWG led by USA and co-chaired by the Netherlands working in English only with the following Mandate:

The EWG will focus its work on:

<sup>13</sup> [CX/PR 15/47/8](#); Comments of Australia, Canada, Chile, Costa Rica, El Salvador, EU, Ghana, Japan, Kenya, USA, AU ([CX/PR 15/47/8-Add.1](#)); China, India, Indonesia, Japan, Morocco, Thailand ([CRD8](#)); Republic of Korea ([CRD14](#)); Japan ([CRD17](#)).

<sup>14</sup> [CX/PR 15/47/9](#); Comments of Australia, Canada, Chile, Costa Rica, El Salvador, EU, Ghana, Japan, AU ([CX/PR 15/47/9-Add.1](#)); China, India, Indonesia, Japan, Morocco, Thailand ([CRD8](#)); Cameroon ([CRD16](#)).

- The consideration of the pending issues related Group 015 Pulses and Group 014 Legume vegetables.
- Further consideration for the crop grouping of Group 011 Fruiting vegetables, cucurbits and Group 020 Grasses of cereal grains including allocation of commodities in the relevant sub-groups.
- New commodity groups for Group 021 grasses, for sugars or syrup production and Group 024 Seeds for beverages and sweets and
- Consideration of the Tables for the selection of representative commodities in Groups 011, 015, 014, 020, 021 and 024.

In order to aid a focused discussion in the EWG in relation to Group 011 and Group 020, the EWG will consider the following questions:

#### **Group 11 – Fruiting vegetables, cucurbits**

- Options: Combine 11B and 11C in Option 1 or maintain Option 1 subgroups 11A, 11B, and 11C;
- Questions for the EWG:
  - What was the rationale for separating melon and winter squash? Which criteria were used?
    - Was commodity-specific residue data considered versus extrapolation from other commodities?
  - Regardless of number of subgroups, can sufficient flexibility be proposed in the Principles and Guidance for Selection of Representative Commodities table to avoid additional data generation?
  - **Output:** Create a table with the rationales by country for the different proposals (see above) and determine if the rationales follow the criteria.

#### **Group 20 – Grasses from Cereal Grains**

- Main issues: (a) pseudocereals; (b) wheat and barley;
- Questions for EWG:
  - What was the rationale for separating pseudocereals from other small grains? Which criteria were used?
    - Was commodity-specific residue data considered versus extrapolation from other commodities?
  - Gather information on grower practices/use of pesticides on pseudocereals.
  - What was the rationale for separating/combining wheat and barley? Which criteria were used?
    - Members to provide data on residues and use patterns
  - **Output:** Create a table with the rationales by country for the different proposals (see above) and determine if the rationales follow the criteria.

#### **PROPOSED DRAFT GUIDANCE ON PERFORMANCE CRITERIA FOR METHODS OF ANALYSIS FOR THE DETERMINATION OF PESTICIDE RESIDUES (Agenda Item 8)<sup>15</sup>**

139. The Delegation of USA, as Chair of the in-session WG, introduced the item. He explained that delegations participating in the in-Session WG felt that the revised document prepared by the Chair of the EWG based on comments submitted to this session, would require in-country review in view of the extensive comments received. He further explained that a number of recommendations were therefore put forward for consideration by the Committee as follows:

- To re-establish the EWG to further revise the document for consideration by the next CCPR.
- To improve the layout of the document for better flow of the information.
- To use more consistently definitions and citations, to clarify language and to avoid duplications.
- To encourage participation of Members and Observers with different technical backgrounds.
- To ensure a more scientifically accurate translation into French and Spanish and
- To propose a timeframe for the revision of the document.

<sup>15</sup> [CX/PR 15/47/10](#); Comments of Canada, Chile, Colombia, Costa Rica, El Salvador, EU, Japan, Peru, AU ([CX/PR 15/47/10-Add.1](#)); Comments of Brazil, China, Ghana, Indonesia, Philippines, Thailand ([CRD9](#)); Revised Guidance on Performance Criteria for Methods of Analysis for the Determination of Pesticide Residues prepared by the Chair of the EWG on Criteria ([CRD12](#)); Nigeria ([CRD13](#)); Comments of Republic of Korea ([CRD14](#)); Cameroon ([CRD 16](#)); Report of the in-session Working Group on Criteria ([CRD20](#)).

140. The Chair of the in-session WG invited delegations to provide their views on the recommendations in order to make progress with the Guidance at the next session of the Committee.

#### Discussion

141. The Committee supported the recommendations of the in-session WG and agreed that the revised document should be circulated well in advance to allow sufficient time for members of the EWG to provide their views.
142. The Committee noted that the EWG should submit the final draft to the Codex Secretariat by no later than early February 2016 in order to have sufficient time for translation, circulation for comments and translation of the comments in the working languages of CCPR for consideration by its next session. The work schedule of the EWG should therefore be adjusted to comply with this deadline.
143. The Committee further noted a proposal to hold a PWG prior to the next CCPR to aid discussion on this issue. The Host Country Secretariat informed the Committee that they would explore the possibility to hold a PWG meeting prior to the next CCPR otherwise an in-session WG could be established in accordance with the regular procedures for the establishment of such groups in Codex meetings.

#### Conclusion

144. The Committee agreed to re-establish the EWG, led by USA and co-chaired by China and India, to further revise the Guidance taking into account comments submitted at this session and those provided by members of the EWG. The EWG would be working in English only. The final draft would be submitted to the Codex Secretariat by no later than early February 2016.

#### STATUS OF THE PROPOSED DRAFT GUIDANCE ON PERFORMANCE CRITERIA FOR METHODS OF ANALYSIS FOR THE DETERMINATION OF PESTICIDES RESIDUES

145. The Committee agreed to return the proposed draft Guidance to Step 2 for revision by the EWG, circulation for comments at Step 3 and consideration at the next session of the Committee.

#### DISCUSSION PAPER ON GUIDANCE TO FACILITATE THE ESTABLISHMENT OF MAXIMUM RESIDUE LIMITS FOR PESTICIDES FOR MINOR CROPS / SPECIALTY CROPS (Agenda Item 9)<sup>16</sup>

146. The Delegation of France, as Chair of the EWG on Minor Crops, introduced the item and explained that the EWG reached agreement on the classification of three of the four borderline crops, i.e. lemons, kiwi fruits and pumpkins. She noted that a solution had been found for the remaining crop, yam, which was included in Table 1 and that MRLs for this commodity could be extrapolated from potatoes and sweet potatoes, and with this change and clarification the Guidance could be considered finalised.
147. The Delegation explained that the EWG had also continued working on the pilot project "minor crop data collection" to identify issues and find solutions to facilitate the establishment of MRLs for minor crops based on the establishment of Codex schedules and priority lists of pesticides. She noted that due to time constraints in the process, the EWG had not been efficient in submitting enough MRLs. Therefore, the EWG suggested that proposals for MRLs for minor crops could be added directly to the Priority List noting that these MRLs could also be set on the basis of extrapolation rules and did not always require a complete data set. The EWG also recommended countries to continue providing data to the GMU Steering Committee in charge of the database and data sharing for minor crops.
148. The Delegation noted the several comments submitted and pointed out that the classification presented in Tables 1 (List of crops for which consumption values are above the threshold of 0.5% worldwide total consumption) and 2 (List of crops for which consumption values are below the threshold of 0.5% worldwide total consumption) was not aimed at being comprehensive and allocating the crop in the right food group. She further noted that the Tables were not intended to interfere with the ongoing work on the revision of the *Classification of Food and Feed* (Item 7). In this regard, she noted that revision of the Tables to reflect the revised Classification and new consumption data would be necessary in future.
149. The Delegation further noted that Guidance as revised by the Chair and Co-Chairs of the EWG took into account several editorial comments and noted that provisions for labels (Section 2) were in accordance with the *Risk Analysis Principles applied by the Codex Committee on Pesticide Residues* and therefore there was no need to make any adjustments.
150. The Delegation recommended to attach the Guidance and related tables as an Annex to the *Risk Analysis Principles applied by CCPR*.

#### Discussion

<sup>16</sup> [CX/PR 15/47/11](#); Comments of Canada, China, El Salvador, EU, Ghana, Indonesia, Kenya, Thailand, USA, AU ([CRD10](#)); Republic of Korea ([CRD14](#)); Revised Guidance to facilitate the establishment of MRLs for pesticides for minor crops prepared by the Chair and Co-Chairs of the EWG on Minor Crops ([CRD21](#)).

151. Delegations supported the proposal in the revised Guidance. They noted that this subject had been discussed for several years and that the work had resulted in a comprehensive and useful document. In addition, the following was noted:
- The development of the Guidance was initiated to provide national authorities with the number of minimum field trials to establish MRLs for minor crops.
  - The discussion in section 2.7 of the 2014 JMPR Report (Item 5a) and requested JMPR to take this Guidance into account when considering MRLs for minor crops.
  - The inclusion of yam in Table 1 together with potatoes and sweet potatoes would still allow extrapolation of MRLs from the group of root and tuber vegetables.
  - The tables could be updated as necessary, account being taken of the revision of the Classification and changes in and/or availability of new / additional food consumption data.
152. The Delegation of Costa Rica, while supporting the document, noted that Section 2 “Label” of the Guidance was not consistent with the *FAO Code of Conduct on the Use of Pesticides*. The Delegation of France noted that Section 2 was consistent with the *Principles of Risk Analysis Applied by CCPR* and would allow the inclusion of proposals for MRLs for minor crops in the CCPR Schedule and Priority List of Pesticides at an earlier stage (i.e. before labels are available).
153. The Delegation of France explained that it was not possible at this point to accommodate requests for additional changes as the Guidance reflected current practices in CCPR / JMPR for the establishment of MRLs for minor crops. The Delegation further explained that new entries or revision of the Tables could be considered at a later stage to reflect the revised *Classification of Food and Feed*.
154. In order to facilitate the update of the Tables, the Committee agreed to include the Guidance together with the Appendix on Methodology to assign Crops into Consumption Categories as an Annex to the *Risk Analysis Principles Applied by the Committee on Pesticide Residues*. The Committee further agreed to make Tables 1 and 2 available as an information document. In addition, the Committee agreed to include cross references and hyperlinks in the two documents to facilitate their use.

### Conclusion

155. The Committee agreed to:
- Forward the Guidance to Facilitate the Establishment of MRLs for Pesticides for Minor Crops together with the Appendix on Methodology to assign Crops into Consumption Categories to CAC for adoption and inclusion as an Annex to the *Risk Analysis Principles Applied by CCPR* (Appendix XI, Part A).
  - Make available the Tables on the application of the Guidance as an information document on the Codex website<sup>17</sup> (Appendix XI, Part B).
  - Encourage member countries to continue to work on the pilot project in the framework of the Global Minor Uses (GMU) Steering Committee in charge of the database and data sharing and
  - Request member countries to provide data to populate the GMU database which would allow the submission of proposals for MRLs for minor crops to the EWG on Priority for inclusion in the CCPR Schedule and Priority List of Pesticide.
156. The Committee thanked the EWG for the successful completion of the work on this very important subject.
157. The Committee noted information on the First Global Minor Use Priority Setting Workshop - Seeking pest management solutions for growers around the world to be held in Chicago (USA) on 20-22 September 2015.<sup>18</sup>

### ESTABLISHMENT OF CODEX SCHEDULES AND PRIORITY LISTS OF PESTICIDES (Agenda Item 10)<sup>19</sup>

158. The Delegation of Australia, as Chair of the EWG on Priorities, introduced the revised Schedules and Priority Lists of Pesticides (CRD2).

#### 2016 Schedule for JMPR evaluations

159. The Chair of the EWG provided the list of new compounds to be scheduled for JMPR evaluation and indicated that pinoxaden and cyclanilprole had been given a reserve status.

<sup>17</sup> The exact website address will be reflected in the Guidance when adopted by CAC.

<sup>18</sup> For more information or for requesting a formal invitation letter, contact Dr Daniel Kunkel at [kunkel@aesop.rutgers.edu](mailto:kunkel@aesop.rutgers.edu)

<sup>19</sup> [CX/PR 15/47/12](#); [CRD2](#) (Revised Schedules and Priority Lists of Pesticides); Comments of China, Morocco, Philippines, AU ([CRD11](#)); Cameroon ([CRD16](#)).

160. The proposed 2016 Schedule of Periodic Reviews was confirmed with chlormequat (15) and fenpropimorph (188) given a reserve status. The compound methidathion (51) was moved from 2018 to the 2016 proposed schedule on the basis of public health concerns. The Committee noted that this compound was no longer supported by the manufacturer.
161. The Committee confirmed the Schedule of new use and other evaluations with minor amendments.
162. The Chair of the EWG advised the Committee that the 2016 Schedule for JMPR evaluations was closed for the addition of new compounds.

### **2017 Priority List**

163. The Committee noted the very high number of new use and other evaluation nominations coupled with 11 new compounds and 6 periodic reviews. The Chair of the EWG indicated that this would be addressed prior to the next session of CCPR.

### **Balance of new and old compound evaluations**

164. The Chair of the EWG commented on the backlog of compounds awaiting periodic review; 24 in Table 2A and 17 in Table 2B. With the apparent decline in new compound nominations in 2018, the Delegation indicated that the ratio of new and old compound evaluations would be reviewed with a possible stronger focus on periodic reviews. This review will occur prior to the next session of CCPR in the EWG. This was welcomed by the Delegation of EU which wished to have a thorough discussion on this issue at the next Session of CCPR.

### **Public Health Concerns**

165. The Chair of the EWG reported that a new table "Candidates for inclusion in Table 2A based on Public Health Concerns", immediately following Table 2A, had been developed as a holding point for those compounds nominated by members on the basis of public health concerns.
166. Some of the nominated compounds were already listed in Table 2A, while some previously listed in Table 2B were moved to Table 2A. Some have been subjected to more recent review, such as acetamiprid (246). This compound has been listed in the 2017 new uses and other evaluations at which time a subsequent review could be undertaken. Some compounds remained in this "holding" table awaiting more information.
167. The Chair of the EWG reported that guazatine (114) has two "guideline levels" in place instead of CXLs following a decision in 1997 to withdraw the ADI of 0.03 mg/kg which was set in 1978. This compound had been placed in the 2020 priority list for periodic review.
168. The Delegation of EU proposed to combine the periodic review of carbendazim with the new uses in 2017. The Delegation of CropLife indicated that it might require more time to prepare the necessary data package.

### **Unsupported pesticides listed in Table 2A and 2B**

169. The Chair of the EWG emphasised the need for all Member countries to review the compounds in Tables 2A and 2B for which support was either unknown or not provided by a manufacturer. The EWG Chair recommended that Members approach manufacturers or potential sponsors with a view to developing required data packages for those pesticides which had relevant use patterns.

### **Fenbutatin oxide (109)**

170. The Chair of the EWG requested advice on a potential supporter for this pesticide. As none was identified for a second year, the Delegation informed the Committee that all fenbutatin oxide (109) CXLs would be recommended for revocation at the next Session of CCPR.

### **National registrations for compounds listed in Table 2A and 2B**

171. The Chair of the EWG indicated that a new table "Current national registrations for compounds listed in Table 2A and 2B", had been developed to list "orphan" compounds for which support has been withdrawn or was not known with a view to seeking member input on whether or not a national registration was currently in place.
172. The Chair of the EWG noted that information from EU member states, Australia, Philippines, Morocco, Japan and Canada had been received. The EWG Chair urged all members to input information to this table to enable informed decision making. The Delegation of EU proposed to cover all EU members states by one column only.

173. The Chair of the EWG indicated that the following compound appeared to have no national registrations, nationally approved use patterns or stocks remaining in commercial trade: Bioresmethrin (93), Tecnazene (115), Diclofluanid (82), Tolyfluanid (162), Dicloran (83) and Aldicarb (117). The Chair of the EWG requested members to submit information on national registrations, current labels and use patterns for each of these compounds. The Delegation stressed that should no information for these compounds be provided prior to the next session of CCPR, the EWG Priorities will recommend to the Committee that the compounds be removed from the Pesticide List and that all CXLs be recommended for revocation by CCPR48.
174. There were no comments from the Committee in regard to this proposal.

#### **Conclusion**

175. The Committee agreed to forward the proposed Schedule of Pesticides for evaluation by the 2016 JMPR to CAC for approval (Appendix XII).
176. The Committee further agreed to re-convene the EWG on Priorities, led by Australia and working in English to provide a report on the schedules and priority list for consideration at its next Session.

#### **OTHER BUSINESS AND FUTURE WORK (Agenda Item 11)<sup>20</sup>**

177. The Delegation of EU informed the Committee of a new international meeting which would revisit the IESTI equation, organised by EFSA in collaboration with FAO, WHO and RIVM back-to-back with 2015 JMPR in Geneva.
178. The meeting will consist of a stakeholder meeting open to all interested parties followed by a scientific workshop, by invitation only, which will prepare the technical report on the outcome of discussions. Information will be available from 1<sup>st</sup> May 2015 on the EFSA website<sup>21</sup>.

#### **DATE AND PLACE OF THE NEXT SESSION (Agenda Item 12)**

179. The Committee was informed that its 48<sup>th</sup> session was tentatively scheduled to be held in China, in one-year time, the final arrangements being subject to confirmation by the Host Country and the Codex Secretariats.

---

<sup>20</sup> Information from EU on the stakeholder meeting and scientific workshop on the IESTI equation ([CRD22](#)).

**APPENDIX II**

**RESPONSES OF CCPR TO THE 2014-2019 STRATEGIC PLAN IMPLEMENTATION**

Responses of CCPR47 are shown in **bold and underlined font**.

| Strategic Goal   | Objective   | Activity   | Expected Outcome   | Measurable Indicators/Outputs  |
|--|---|--|--|--|
| 1: Establish international food standards that address current and emerging food issues.   | 1.1: Establish new and review existing Codex standards, based on priorities of the CAC.                             | 1.1.1: Consistently apply decision-making and priority-setting criteria across Committees to ensure that the standards and work areas of highest priority are progressed in a timely manner.                             | New or updated standards are developed in a timely manner.                           | - Priority setting criteria are reviewed, revised as required and applied.<br>- # of standards revised and # of new standards developed based on these criteria.   |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b><u>Yes</u></b><br/>                     Does the Committee use any specific criteria for standards development?<br/> <b><u>CCPR has developed specific criteria for prioritizing pesticides for JMPR evaluation, i.e. Section 5.2 “Selection of Pesticides for JMPR Evaluation” of the Risk Analysis Principles applied by the Codex Committee on Pesticide Residues.</u></b><br/>                     Does the Committee intend to develop such criteria? <b><u>No</u></b></p>   |   |  |  |  |
|  | 1.2: Proactively identify emerging issues and Member needs and, where appropriate, develop relevant food standards. | 1.2.1: Develop a systematic approach to promote identification of emerging issues related to food safety, nutrition, and fair practices in the food trade.   | Timely Codex response to emerging issues and to the needs of Members.                | - Committees implement systematic approaches for identification of emerging issues.<br>- Regular reports on systematic approach and emerging issues made to the CCEXEC through the Codex Secretariat.        |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b><u>Yes</u></b><br/>                     How does the Committee identify emerging issues and members needs?<br/> <b><u>Emerging issues identified by Members, other committees or FAO/WHO are brought to the attention of the Committee.</u></b><br/>                     Is there a systematic approach? Is it necessary to develop such an approach?<br/> <b><u>Currently there is no systematic approach, however, there might be a need to develop one should the current process is found to be insufficient.</u></b></p> |   |  |  |  |
|  |   | 1.2.2: Develop and revise international and regional standards as needed, in response to needs identified by Members and in response to factors that affect food safety, nutrition and fair practices in the food trade. | Improved ability of Codex to develop standards relevant to the needs of its Members. | - Input from committees identifying and prioritizing needs of Members.<br>- Report to CCEXEC from committees on how standards developed address the needs of the Members as part of critical review process. |

| Strategic Goal   | Objective   | Activity   | Expected Outcome   | Measurable Indicators/Outputs   |
|--|---|--|--|---|
| <b>Included in question to 1.2</b>   |   |  |  |   |
| 2: Ensure the application of risk analysis principles in the development of Codex standards.   | 2.1: Ensure consistent use of risk analysis principles and scientific advice. | 2.1.1: Use the scientific advice of the joint FAO/WHO expert bodies to the fullest extent possible in food safety and nutrition standards development based on the "Working Principles of Risk Analysis for Application in the Framework of the Codex Alimentarius". | Scientific advice consistently taken into account by all relevant committees during the standard setting process.                      | <ul style="list-style-type: none"> <li>- # of times the need for scientific advice is:</li> <li>- identified,</li> <li>- requested and,</li> <li>- utilized in a timely manner.</li> </ul>  |
| <p><b>Question to the Committee:</b></p> <p>Is this activity relevant to the work of the Committee? <b>Yes</b></p> <p>Does the committee request scientific advice in course of its work, how often does it request such advice? Does the committee always use the scientific advice, if not, why not?</p> <p><b><u>The work of CCPR is based on the scientific advice provided by JMPR. The Committee requests scientific advice from JMPR every year through the establishment of Codex schedules and priority list of pesticides. The "Concern Form" developed by CCPR (Section 5.5 "Procedure for Submitting Concerns and Clarifications" of the Risk Analysis Principles applied by the Codex Committee on Pesticide Residues) allows Members to communicate concern and ask clarification on JMPR recommendations when Members have concern.</u></b></p> |   |  |  |   |
|  |   | 2.1.2: Encourage engagement of scientific and technical expertise of Members and their representatives in the development of Codex standards.  | Increase in scientific and technical experts at the national level contributing to the development of Codex standards.                 | <ul style="list-style-type: none"> <li>- # of scientists and technical experts as part of Member delegations.</li> <li>- # of scientists and technical experts providing appropriate input to country positions.</li> </ul>   |
| <p><b>Question to the Committee:</b></p> <p>Is this activity relevant to the work of the Committee? <b>YES</b></p> <p>How do members make sure that the necessary scientific input is given into country positions and that the composition of the national delegation allows to adequately present and discuss this position? What guidance could be given by the Committee or FAO and WHO?</p> <p><b><u>Members involve their scientific and technical experts (from and outside government) to provide inputs and comments to the work of CCPR. Delegations include experts who have technical knowledge and expertise to participate in the discussion.</u></b></p> <p><b><u>Training and ad hoc workshops can contribute to strengthen technical participation of countries in the work of CCPR.</u></b></p>  |   |  |  |   |
|  |   | 2.1.3: Ensure that all relevant factors are fully considered in exploring risk management options in the context of Codex standard development.  | Enhanced identification, and documentation of all relevant factors considered by committees during the development of Codex standards. | <ul style="list-style-type: none"> <li>- # of committee documents identifying all relevant factors guiding risk management recommendations.</li> <li>- # of committee documents clearly reflecting how those relevant factors were considered in the context of standards development.</li> </ul> |

| Strategic Goal  | Objective   | Activity  | Expected Outcome   | Measurable Indicators/Outputs  |
|---|---|---|--|--|
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     How does the Committee ensure that all relevant factors have been taken into account when developing a standard and how are these documented?<br/> <u><b>In conducting its work in developing risk management principles and guidelines, the Committee is bound by the Procedural Manual and the Codex mandate. The Committee follows the Working Principles for Risk Analysis and the Risk Analysis Principles applied by the Codex Committee on Pesticide Residues and ensures that only legitimate factors are taken into account.</b></u></p>   |   |   |  |  |
|   |   | 2.1.4: Communicate the risk management recommendations to all interested parties.   | Risk management recommendations are effectively communicated and disseminated to all interested parties.                 | - # of web publication/ communications relaying Codex standards.<br>- # of media releases disseminating Codex standards. |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     When taking a risk management decision, does the committee give guidance to members how to communicate this decision? Would more consideration of this be helpful to members?<br/> <u><b>Communication of the risk management recommendations are done through standards, guidelines, and other related texts, which are posted on the Codex website. The development of a communication strategy would be helpful to members.</b></u></p>  |   |   |  |  |
| 3: Facilitate the effective participation of all Codex Members.   | 3.1: Increase the effective participation of developing countries in Codex.   | 3.1.5: To the extent possible, promote the use of the official languages of the Commission in committees and working groups.                | Active participation of Members in committees and working groups.  | - Report on number of committees and working groups using the languages of the Commission                                |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     Is the use of official languages in working groups of the committee sufficient? <u><b>The Committee mainly uses English for its Working Groups. When possible the Committee uses other official language which contributes to enhance participation of Members.</b></u><br/>                     What are the factors determining the choice of languages? How could the situation be improved?<br/> <u><b>The Committee determines the choice of language based primarily on the availability of resources and on the host of the working group (WG). Co-chairing of WGs might facilitate the use of other official language than English.</b></u></p> |   |   |  |  |
|   | 3.2: Promote capacity development programs that assist countries in creating sustainable national Codex structures. | 3.2.3: Where practical, the use of Codex meetings as a forum to effectively conduct educational and technical capacity building activities. | Enhancement of the opportunities to conduct concurrent activities to maximize use of the resources of Codex and Members. | -. # of activities hosted on the margins of Codex meetings.  |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     Does the Committee organize technical capacity activities or other activities in the margins of Committee sessions?<br/>                     If yes – how many and with which topics have been organized in the past. If no – could this be useful and what topics could be addressed?<br/> <u><b>Yes, workshops and side events have been arranged in recent years to promote awareness on CCPR work and provide technical information on specific subject (e.g. workshop on Safety Assessment of Pesticide Residues held back-to-back with CCPR45).</b></u></p>   |   |   |  |  |

| Strategic Goal  | Objective   | Activity   | Expected Outcome   | Measurable Indicators/Outputs   |
|---|---|--|--|---|
| 4: Implement effective and efficient work management systems and practices.   | 4.1: Strive for an effective, efficient, transparent, and consensus based standard setting process. | 4.1.4: Ensure timely distribution of all Codex working documents in the working languages of the Committee/ Commission.                | Codex documents distributed in a more timely manner consistent with timelines in the Procedural Manual.        | <ul style="list-style-type: none"> <li>- Baseline Ratio (%) established for documents distributed at least 2 months prior to versus less than 2 months prior to a scheduled meeting.</li> <li>- Factors that potentially delay the circulation of documents identified and addressed.</li> <li>- An increase in the ratio (%) of documents circulated 2 months or more prior to meetings.</li> </ul>  |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     Does the Committee have a mechanism in place to ensure timely distribution of documents? What could be done to further improve the situation?<br/> <u><b>The requirement for timely distribution of documents is stated in the Procedural Manual. Close monitoring of the activities of EWGs and adherence to deadlines (e.g. request for comments) would help ensuring more timely preparation and distribution of documents in all languages.</b></u></p> |   |  |  |   |
|   |   | 4.1.5: Increase the scheduling of Work Group meetings in conjunction with Committee meetings.  | Improved efficiency in use of resources by Codex committees and Members  | - # of physical working group meetings in conjunction with committee meetings, where appropriate.   |
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <b>Yes</b><br/>                     Does the Committee hold physical working groups independent of Committee sessions? If yes – why is this necessary?<br/> <u><b>CCPR uses EWGs as the first choice and PWGs, when necessary, are held in conjunction with the Committee sessions. In-session working groups are also established on specific subjects (e.g. minor crops, classification) to facilitate the work of the Committee.</b></u></p>   |   |  |  |   |
|   | 4.2: Enhance capacity to arrive at consensus in standards setting process.                          | 4.2.1: Improve the understanding of Codex Members and delegates of the importance of and approach to consensus building of Codex work. | Members and delegates awareness of the importance of consensus in the Codex standard setting process improved. | <ul style="list-style-type: none"> <li>- Training material on guidance to achieve consensus developed and made available in the languages of the Commission to delegates.</li> <li>- Regular dissemination of existing material to Members through Codex Contact Points.</li> <li>- Delegate training programs held in association with Codex meetings.</li> <li>- Impediments to consensus being achieved in Codex identified and analyzed and additional guidance developed to address such impediments, if necessary.</li> </ul> |

| Strategic Goal  | Objective | Activity | Expected Outcome | Measurable Indicators/Outputs |
|---|-----------|----------|------------------|-------------------------------|
| <p><b>Question to the Committee:</b><br/>                     Is this activity relevant to the work of the Committee? <u>Yes</u><br/>                     Are there problems with finding consensus in the Committee? If yes – what are the impediments to consensus? What has been attempted and what more could be done?<br/> <u>Problems may arise on certain topics; however the Committee is making all efforts to ensure that its decisions are taken on the basis of consensus; WGs are used to facilitate consensus building.</u></p> |           |          |                  |                               |

**APPENDIX IX****DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED****At Step 7****PULSES****Class A****Type 2                      Vegetables Group 015                      Group Letter Code VD**

Group 015. Pulses are derived from the mature seeds, naturally or artificially dried, of leguminous plants known as beans (dry) and peas (dry). Pulses are dry seeds without the pods.

The seeds in the pods are protected from most pesticides applied during the growing season except pesticides which show a systemic action. The dry beans and peas however are often exposed to post harvest treatments.

The dry pulses are consumed after processing or household cooking.

Commodities in this group are grouped in 2 subgroups:

15A Dry beans

15B Dry peas

Portion of the commodity to which the MRL applies (and which is analysed): **Whole commodity.**

**APPENDIX X****PROPOSED DRAFT REVISION OF THE CLASSIFICATION OF FOOD AND FEED****At Step 4****LEGUME VEGETABLES****Class A****Type 2                      Vegetables                      Group 014                      Group Letter Code VP**

Group 014. Legume vegetables are derived from the succulent seed and immature pods of leguminous plants commonly known as beans and peas.

Pods are fully exposed to pesticides during the growing season, whereas the succulent seed is protected within the pod from most pesticides, except pesticides with systemic action.

The succulent forms may be consumed as whole pods or as the shelled product. Immature soya bean is usually marketed and served with pods, but pods are not edible and only succulent seeds are eaten.

This group contains 4 subgroups based on the morphology and growing practise:

14A Beans with pods

14B Peas with pods

14C Succulent beans without pods

14D Succulent peas without pods

Portion of the commodity to which the MRL applies (and which is analysed): **Whole commodity, unless otherwise specified.**

**APPENDIX XI****Part A****GUIDANCE TO FACILITATE THE ESTABLISHMENT OF MRLS FOR PESTICIDES FOR MINOR CROPS****For adoption****1. Minimum number of trials for setting MRL on minor crops**

To assist member countries to identify minor crops and facilitate data submission to JMPR, criteria have been developed for use by CCPR and JMPR. This includes the minimum number of trials necessary to support the establishment of MRLs for minor crops. Due to lower importance of minor crops in term of consumption, a lower number of trials may be needed to set MRLs than required for major crops.

Three categories based on consumption levels (% of total daily consumption/capita) have been derived.

- Category 1 - No data in FAO Stat and No GEMS Food Cluster data: to be considered on a case by case basis
- Category 2 - < 0.5% worldwide and < 0.5% in all of the clusters: minimum of 4 trials
- Category 3 - < 0.5% worldwide and > 0.5% in one or more clusters: minimum of 5 trials

A methodology was defined to assign crops to these categories (Annex 1). It is based on two tiered approach, the first tier based on worldwide consumption and the second one on "local" consumption as defined in GEMS FOOD clusters.

Crops are classified according to worldwide consumption values above and below the threshold criteria:

An information document on the application of this Guidance is available on the Codex website<sup>1</sup>, it includes

- Crops for which worldwide consumption values are above the threshold of 0.5% of the total daily consumption/capita
- The three categories of crops for which worldwide consumption values are below this threshold of 0.5%

Crops listing was further refined using national consumption data and on the request of member countries. Additional criteria were used in specific instances for seasonal high consumption and/or large portion intakes instead of average intakes.

The information document and the minimum number of trials may be revised as necessary to take into account the changes in worldwide consumption levels and additional crops entering the Codex classification for food and feed.

The number of trials specified is the minimum proposed to set MRLs. However data submitters should present as many trials as possible corresponding to Good Agricultural Practices. JMPR, based on expert judgment, can determine if trials provided fulfil the JMPR requirements and are adequate to establish robust MRLs.

Group MRLs and the use of monitoring data are not in the scope of this guidance. These minimum numbers of trials are only relevant to establish MRLs on individual crops.

**2. Label**

When there is no formal label, the data on minor crop should be accompanied by an official letter from a government agency that states the chemical is being used on the crop and outlines GAP being used by growers in that country.

**3. Global data set**

Residue trials from different regions of the world might be taken into account for setting MRLs on minor crops. JMPR performs the evaluation of the submitted information and estimates maximum residue levels regardless of whether it represents worldwide use or is limited to a region, therefore Codex MRLs are applicable regardless of the commodity origin

---

<sup>1</sup> [www.codexalimentarius.org](http://www.codexalimentarius.org)

Provided these data are conducted within the required 25% variation of the GAP, the JMPR is encouraged to accept data from several countries to support the establishment of a Codex MRL. On the other hand, there should also be acceptance of submissions on priority chemicals that are bundled from multiple countries and submitted by just one country that has agreed to take the lead on behalf of others.

#### **4. Use of proportionality**

The Committee agreed that proportionality principle was applicable to insecticides, fungicides, herbicides and plant growth regulators and that application rate is the only deviation from critical GAP (cGAP).

100% scaled data could be used for large data set and "at least 50% of trials at GAP may be requested on a case-by-case basis depending for example on the range of scaling factors", and some trials at GAP might be useful as confirmatory data. However using 100% scaled data may help facilitate setting MRLs for minor crops if the data are regarded as sufficiently robust.

The proportionality principle can be used on residue data from different parts of the world provided the overall uncertainty of the residue estimate is not increased.

#### **5. Extrapolation**

Extrapolation principles established by the CCPR should be used to set crop group MRLs that include minor crops. Manufacturers and members are encouraged to include minor crops when a compound is scheduled in the priority list. This should allow for additional minor crops to be added to the existing candidate crops and to set MRLs via extrapolations provided that a label supporting GAP is submitted to JMPR.

In case a minor crop is a representative commodity for a crop group (or subgroup) and a MRL is intended for the whole group, a sufficient number of trials to cover the total group consumption level should be provided.

### Methodology to assign crops into consumption categories

#### Tier 1 Calculation:

Tier one ranking was calculated from GEMS/FOOD Cluster Diet as follow:

Items from the same origins were grouped together. Basic grouping was proposed to have only one item per crop if possible, which is more in line with the process of MRL setting and residue trials, for example all commodities containing wheat and wheat extracts were tentatively grouped together.

For each country, consumption data (GEMS/FOOD five years average: 2002-2007) were compiled in accordance with the predefined list for each group of commodities, the corresponding consumption value were added.

Then, each compiled consumption value was weighed with the corresponding country population and divided by the world population. The resulted sum for each commodity consequently simulates better the relative importance of each commodity in the world and was considered to fit better with the tier 1 approach.

Hence, for each commodity, the following calculation was realized:

$$\%_i = \left( \frac{\sum_c \frac{\text{consumption}_{i,c} \times \text{population}_c}{\text{population}_w}}{\sum_c \frac{\text{total consumption}_c \times \text{population}_c}{\text{population}_w}} \right) \times 100$$

- $\%_i$ : percentage of the commodity "i" in worldwide
- $\text{consumption}_{i,c}$ : consumption of the commodity "i" in the corresponding country "c" (g/hab/day):
- $\text{total consumption}_c$ : total consumption (including sugars, beverages and commodities from animal origins, etc.) in the corresponding country "c" (g/hab/day):
- $\text{population}_c$ : population in the country "c" (hab)
- $\text{population}_w$ : world population (hab)

#### Tier 2 Calculation:

Tier 2 focuses on different existing consumption profiles within each cluster. Indeed a crop considered of minor importance calculated on a world basis could be of relative high importance in a national diet (depending on the quantity and variety of crops or commodities consumed in the country).

The clustering system gathers together similarities between diets and gets a good overview of consumption profiles in the world. Nevertheless, in order not to influence excessively the results by a high local consumption inside a cluster, and in addition since a very local consumption is in all likelihood not the commodity the most subjected to international trade and consequently for which a CXL is required, each country consumption was weighted by its population inside its cluster to get a better consumption profile of the cluster. This better takes into account the real number of consumer within each cluster.

Hence, for each commodity and each cluster, the following calculation was realized:

$$\%_j = \left( \frac{\sum_c \frac{\text{consumption}_{j,c} \times \text{population}_c}{\text{population}_z}}{\sum_c \frac{\text{total consumption}_c \times \text{population}_c}{\text{population}_z}} \right) \times 100$$

- $\%_j$ : percentage of the commodity 'j' in the cluster
- $\text{consumption}_{j,c}$ : consumption of the commodity "j" in the corresponding country "c" (g/hab/day):
- $\text{total consumption}_c$ : total consumption (including sugars, beverages and commodities from animal origins, etc.) in the corresponding country "c" (g/hab/day):
- $\text{population}_c$ : population in the country "c" (hab)
- $\text{population}_z$ : total population in the cluster (hab)

**Part B****INFORMATION DOCUMENT ON THE APPLICATION OF THE GUIDANCE TO FACILITATE THE ESTABLISHMENT OF MRLS FOR PESTICIDES FOR MINOR CROPS**

This information document should be used in conjunction with Guidance to facilitate the establishment of MRLs for pesticides for minor crops<sup>2</sup>.

To assist member countries to identify minor crops and facilitate data submission to JMPR, criteria have been developed for use by CCPR and JMPR. This includes the minimum number of trials necessary to support the establishment of MRLs for minor crops.

3 categories based on consumption levels (% of total daily consumption/capita) have been derived

- Category 1 - No data in FAO Stat and No GEMS Food Cluster data: to be considered on a case by case basis
- Category 2 - < 0.5% worldwide and < 0.5% in all of the clusters: minimum of 4 trials
- Category 3 - < 0.5% worldwide and > 0.5% in one or more clusters: minimum of 5 trials

This information document consists of two tables

- Crops for which worldwide consumption values are above the threshold of 0.5% of the total daily consumption/capita (Table 1)
- The three categories of crops for which worldwide consumption values are below this threshold of 0.5% (Table 2)

---

<sup>2</sup> Annex to the *Risk Analysis Principles applied by the Codex Committee on Pesticide Residues* (Codex Procedural Manual)

| Pinoxaden [Syngenta] Switzerland (herbicide) (999) <b>RESERVE</b> | Pinoxaden     | Registered MRLs > LOQ          | Wheat; barley   | Wheat (60); barley (60)  |
| Pendimethalin (herbicide) BASF – USA (999)                        | Pendimethalin | Registered? y MRLs > LOQ? Most | Leafy Lettuce; leafy brassica (mustard greens, kale); alfalfa and grass hay; fresh legumes/dry pulses; citrus; tree nuts; carrot/other root and tuber; bulbs: onion; dry and green onion; asparagus; leeks; celery, celeriac  | Leafy brassica (kale)(7); alfalfa (23); grass hay (12); fresh legumes/dry pulses (21); citrus (13); tree nuts (5); carrot (16); celeriac (9); green onion (3); asparagus (4); leeks (7); celery (11)<br>US Data: Leafy lettuce (9); leafy brassica (mustard greens (9); grass hay (8); citrus (16); tree nuts (23); carrot (10); green onion and onion (13); asparagus (6) |
| Spiromesifen Germany [Bayer CropScience] (insecticide) (999)      | Spiromesifen  | Registered MRLs > LOQ          | Legume vegetables (beans/peas (dry, succulent, edible podded); leafy vegetables (head lettuce, leaf lettuce, spinach, celery); brassica vegetables (broccoli, cabbage, mustard, green); root and tuber vegetables (potato); fruiting vegetables (tomato, bell pepper, chili pepper); cucurbits (cucumber, melon, summer squash); pulses; (beans dry, peas dry); cereals (wheat, maize, sweet corn, field corn, popcorn); berries (strawberries); tea, coffee, herbal infusions and cocoa (tea, coffee); tropical fruits (papaya, passion fruit); herbs; rotational crops (alfalfa, barley, oat, sugar beet, bulb vegetables (Welsh / green onions, wheat), sorghum, India Tea | Legume vegetables (27); leafy vegetables (26); brassica vegetables (21); root and tuber vegetables (16); fruiting vegetables (67); cucurbits (34); pulses (19); cereals (88); berries (16); tea (8); coffee (10); herbs (5); tropical fruits (9); rotational crops (66), sorghum (12)  |

| 2016 JMPR - NEW USES AND OTHER EVALUATIONS – PROPOSED SCHEDULE |  |  |  |
|--|--|--|--|
| TOXICOLOGY   | RESIDUE  | Commodities  | Residue trials provided  |
|  | Benzovindiflupyr (261) (fungicide) [Syngenta] - Canada | Cereal small grains (wheat, barley, oats, rye, triticale), canola, grapes, pome (apples and pears), pulses, vegetable (fruiting, cucurbits), corn/maize, cotton, peanuts, soybean (included second time for JMPR review based on US critical use pattern), potatoes, sugarcane, Jerusalem artichokes, ginger, turmeric | Wheat (33 trials), barley (21 trials), oats (extrapolated from barley), rye and triticale (extrapolated from wheat), canola (13 trials), grapes (17 trials), pome fruits (30 trials for apples and pears), dry beans (14 trials), dry peas (10 trials), fruiting vegetables (tomato (12 trials) and bell and non-bell peppers (9 trials)), cucurbits (cucumbers (6 trials), summer squash (5 trials), cantaloupe (6 trials)), field corn, popcorn and sweet corn (total of 36 trials), cotton (12 trials), peanuts (15 trials), soybeans (23 US trials), potatoes (16 trials), sugarcane (12 trials), Jerusalem artichokes, ginger and turmeric (extrapolated from potatoes) |

| 2016 JMPR - NEW USES AND OTHER EVALUATIONS – PROPOSED SCHEDULE   |  |   |  |
|--|--|---|--|
| TOXICOLOGY   | RESIDUE  | Commodities   | Residue trials provided  |
|  | Bixafen [Bayer CropScience] (262)  | FAO followup evaluation to consider rotational crop scenario  | 4 limited field rotational crop studies  |
|  | Buprofezin [Nihon] (173)   | Soya bean (Brazil), Basil (Thailand)  |  |
|  | Chlorantraniliprole (230)  | USA - Green onions (Welsh onion, scallion); peanut; wheat; barley; sorghum  | Green onion (5); peanut (6); wheat (5); barley (3); grain sorghum (3)  |
| Cyclaniliprole [Ishihara Sangyo Kaisha] USA (999) (insecticide) Not Registered until March 2016 MRLs > LOQ | Cyclaniliprole   | Potato; broccoli; cabbage; mustard green; brussels sprout; kale; cauliflower; soybean, dried; soybean, immature (with pods); tomato; pepper; apple; pear; cherry; peach; plum; apricot; plum; nectarine; almond hulls; almond; pecan; lettuce, head; lettuce, leaf; spinach; grape; cucumber; muskmelon; summer squash; tea | Potato (8); broccoli (21); cabbage (34); mustard green (5); brussels sprout (6); kale (4); cauliflower (8); soybean, dried (6); soybean, immature (with pods) (3); tomato (53); pepper (36); apple (46); pear (16); cherry (17); peach (24); plum (26); apricot (6); plum (26); nectarine (2); almond hulls (5); almond (5); pecan (5); lettuce, head (9); lettuce, leaf (11); spinach (9); grape (43); cucumber (9); muskmelon (10); summer squash (9); tea (6) |
|  | Deltamethrin (135) [Bayer CropSciences] - Canada                                       | Rapeseed/canola - MRL>LOQ   | Rapeseed/canola (13 trials)  |
|  | Dimethomorph (225) [BASF]  | Leaf lettuce – alternative GAP  |  |
|  | Fenamidone (264) [Bayer CropSciences]  | Mustard green, spinach – alternative GAP  |  |
|  | Fenpropathrin (185) [Sumitomo]   | Peaches, cherries, pome fruit – alternative GAP   |  |
|  | Fipronil (202) [BASF]  | Basil (Thailand)  |  |
| 90 day study (BSA)   | Fluensulfone (265) [Makhteshim]  | Carrot, potato, strawberry, brassica vegetables, radish, Japanese leafy vegetables, rotational crops  | Carrot (12), potato (16), strawberry (8), brassica vegetables (17), radish (4), Japanese leafy vegetables (8), rotational crops  |
|  | Metrafenone 278) [BASF]  | Pome fruit, stone fruit, hops, melons   | Pome fruit (18), stone fruit (32), hops (?), melons (25)   |
|  | Methoprene (147) USA [Dow AgroSciences]  | Cottonseed, Safflower Seed, Linseed, Sunflower Seed, Rapeseed, Whole Commodity  | Sunflower (4)  |
|  | Penthiopyrad (253)   | Maize fodder, Mustard greens (alternative GAP) USA – Blueberry; Cranberry   | Blueberry (9) and Cranberry (7)  |
|  | Saflufenacil [BASF] USA (251)  | Alfalfa; Barley and Wheat Hay/Straw/Fodder; Cereal Grains (desiccant uses); Forage Grasses; Linseed; Peanuts; Poppy seed; Sesame seed; Mustard seed; Safflower; Borage; Gold of Pleasure; Castor Bean; Olive; Sugarcane; Pomegranate; Animal products   | Alfalfa (12); cereals (wheat 25; barley 15), Hay/Straw/Forage Grasses (16), Peanuts (8), [Linseed, Borage, Mustard seed, Poppy seed, Sesame seed, Gold of Pleasure - extrapolation from canola (16)], [Castor Bean, Safflower - extrapolation from sunflower (12)], Olive (4), Sugarcane (9), Pomegranate (4), Animal products (new dietary burdens, no new trials)  |
| Sulfoxaflor (252) [Dow AgroSciences]   | Sulfoxaflor [Dow AgroSciences] – USA Request for new MRLs, based upon new residue data | Corn, grain; corn, sweet; sorghum, grain; pineapple, cacao, beans, rice, grain; avocado   | Corn, field (15); corn, sweet (9); sorghum (9); pineapple (8); cacao (8); rice (12); avocado (5)   |

| 2016 JMPR - NEW USES AND OTHER EVALUATIONS – PROPOSED SCHEDULE    |   |   |  |
|---|---|---|--|
| TOXICOLOGY  | RESIDUE                                 | Commodities   | Residue trials provided  |
| USA -<br>Re-evaluation of developmental tox, based upon new data. |   | Tree nut (USA)  | Tree nut   |
|   | Tolfenpyrad [Nihon Nohyaku] – USA (269) | Almonds; pecans; pistachio; hazelnuts; walnuts; grape (table); raisin; juice (if MRL not included under table grape); apricots; plum; prunes; peach; nectarine; cherry; pear; lemon; lime; grapefruit; tangerine (mandarin); oranges; cantaloupe; cucumbers; summer squash; pumpkin; watermelon; peppers; tomatoes; cabbage; head lettuce; leaf lettuce; celery; spinach; cauliflower; potatoes; cotton seed; and corresponding animal commodities. | Brassica (cole) leafy vegetable: Cabbage (6); cauliflower (6); mustard greens (5); cotton (12); Citrus fruit: Grapefruit (6); lemon (5); orange (12); Fruiting vegetables, cucurbits (cantaloupe (6); cucumber (6); summer squash (5); Fruiting vegetables, other than cucurbits: pepper (9); tomato (12); Berries and other small fruits: Grape (12); raisin (1); Leafy vegetable: Head lettuce (6); leaf lettuce (6); spinach (6); pear (6); Root and tuber vegetables: Potato (16); Stalk and stem vegetables: Celery (6); Stone fruits: Cherry, sweet (6); peach (9); plum (6); prune (dried plum) (2); Tree nuts: Almond (5); pecan (5) |

| Review of new tox. Data<br>See comment                     | Acetamiprid (246) [Syngenta]        | India - Rice, fresh vegetables (cabbage, cauliflower, okra, green chilli, green pea, bitter gourd, cucumber, brinjal and capsicum), grapes, Tea            | Await field trial information<br>COMMENT: Although acetamiprid was quite recently reviewed by JMRR (2011), there are new toxicological data on developmental neurotoxicity which may lead to a lowering of the current ARfD (0.1 mg/kg bw). EFSA, in its reasoned opinion on developmental neurotoxicity of acetamiprid and imidacloprid (December 2013) recommends a 4 times lower ARfD of 0.025 mg/kg bw. With such a lowered ARfD, the CXLs for apple, chard and citrus fruit would be of concern. |

| Methidathion (51) [Syngenta]<br><b>Not supported by the manufacturer Concern form lodged</b> | Methidathion (51)   | The active substance has been re-evaluated for residues (after its first inclusion in 1972) in 1992. An ARfD was derived in the toxicological re-evaluation in 1997.<br>As a consequence of this ARfD a couple of MRLs are not safe for consumers. Due to the fact that no periodic re-evaluation of residues took place in 42 years it is proposed to carry out a new evaluation. | The JMPR has established an ADI of 0.001 mg/kg bw/d and an ARfD of 0.01 mg/kg bw/d in 1997. A risk assessment was performed using the EFSA PRIMO including all MRLs that were considered relevant for international trade. The ADI was exceeded for 25 European diets with the highest exposure representing 2392% of the ADI. Citrus fruits, olives for oil production and milk were shown to be the main contributors. Citrus fruits also exceeded the ARfD (up to 6631%). A second exposure calculation delete the existing MRLs for citrus fruits, pome fruits and sunflower seeds still showed an that the ADI for 5 European diets was exceeded (up to 301%). For further details see EFSA evaluation on the internet<br><a href="http://www.efsa.europa.eu/en/efsajournal/doc/1639.pdf">athttp://www.efsa.europa.eu/en/efsajournal/doc/1639.pdf</a> . | 1992                | 0.001 -<br>1997 | 0.01 -<br>1997 |

| <p>Carbendazim<br/>[Nippon Soda Co]<br/>(72)</p> <p><b>Supported Scheduling subject to availability of full data package</b></p> | Carbendazim         |   | <p>Manufacturer of thiophanate-methyl will support Codex MRLs for carbendazim(72) which covers thiophanate-methyl(77).</p> <p>all the relevant studies required to maintain the Codex MRLs for thiophanate-methyl (expressed as carbendazim) will be submitted</p> <p>Public health concerns were lodged by the EU – see next table</p> <p>The last periodic re-evaluation of carbendazim was in 1998. Active substances benomyl and thiophanate-methyl are no longer supported by the sponsor but the CXLs for carbendazim still cover uses of these two active substances meaning that a couple of CXLs are obsolete. Moreover, the EU has a lower ARfD. Acute health risks were identified for several commodities in the 2006 CCPR. In addition, the EU received an import tolerance application for the use of carbendazim in rice and it turned out that the existing CXL for rice is based likely on an obsolete US GAP on benomyl. In this case as well an acute risk could not be excluded</p> |                     |              |              |

| Dithiocarbamates (105) [Taminco] (ferbam, maneb/mancozeb, propineb, thiram, ziram) | Dithiocarbamates (105) | Await advice | <p>Residue definition applies to all DTC – propineb; mancozeb; ferbam; ziram; thiram; maneb; metiram; zineb</p> <p><b>Netherlands - public health concerns</b></p> <p>Several (serious) public health risks have been identified for several dithiocarbamates (Maneb/mancozeb, propineb, thiram, ziram) using EU data (ARfD and MRLs with conversion factor corrections).</p> <p>JMPR has not derived ARfDs for these substances (except an interim ARfD of 0.1 mg/kg bw for propineb) nor performed acute dietary risk assessment as it was not yet done at that time (before 2000). Various group ADI's for several dithiocarbamates (e.g. 0.03 mg/kg for maneb, mancozeb, metiram and zineb, 0.007 mg/kg for propineb, 0.003 mg/kg for ziram and ferbam, and 0.01 mg/kg for thiram).</p> <p>We acknowledge that a periodic review of propineb has been performed in 2004. Still a risk has been identified for peppers and (dried) tomatoes using the HR for peppers of 13 mg/kg and the HR for tomatoes of 2.9 mg/kg for propineb and the interim ARfD of 0.1 mg/kg bw. Processing data have not been included in this calculation.</p> <p>For <u>thiram</u> risks have been identified for e.g. use on apples and pears (recommended MRL of 5 mg/kg listed under ziram, no STMR or HR listed, Annex I, JMPR report 2004 from <a href="http://www.fao.org/fileadmin/templates/agphome/documents/Pests_Pesticides/JMPR/Reports_1991-2006/report2004jmpr.pdf">http://www.fao.org/fileadmin/templates/agphome/documents/Pests_Pesticides/JMPR/Reports_1991-2006/report2004jmpr.pdf</a>) falling back on the use of the ADI of 0.01 mg/kg bw/day (no ARfD exists). Using the EU ARfD of 0.6 mg/kg bw no risks are identified any more.</p> <p>For <u>ziram</u> risk are identified e.g. use pome fruit, even if making use of the EU ARfD (0.08 mg/kg bw) instead of falling back on the ADI of 0.003 mg/kg bw/d in the absence of an JMPR ARfD.</p> <p>Due to time constraints, we have not yet further explored the risks identified for maneb/mancozeb. The majority of the dithiocarbamates have been evaluated prior to the date that acute dietary risk assessment became part of the JMPR evaluations.</p> <p>We propose therefore to update the evaluations with regard to the acute dietary risk assessment of all the dithiocarbamates in one overall assessment. This would enable identification of all the possible risks, establish whether re-evaluation of the existing data for specific uses is appropriate, whether an ARfD should be derived, and to determine whether they should subsequently be placed on the priority lists.</p> <p>Conversion factors (from CS<sub>2</sub> to active substance) are not listed in the Annex: Mancozeb: 1.783, Maneb: 1.743, Propineb: 1.904, Thiram: 1.580, Ziram: 2.009</p> | 1996T, 1993R, (2004 propineb) | Range of group ADIs | Interim ARfD propineb 0.1 mg/kg 1995 |

Toxicological re-evaluation was done in 2000 and an ARfD was derived in 2005. (see CX/PR 12/44/14-Add.1 March 2012)</i><br/><i>As a consequence of this ARfD a couple of MRLs are not safe for consumers. Due to the fact that no periodic re-evaluation of residue took place since 35 years all MRLs should be reviewed.</i><br/>From EFSA evaluation an ADI of 0,025 mg/kg bw and an ARfD of 0.05 mg/kg bw was derived in 2010. This is in line with the current JMPR values of 0.03 mg/kg bw (ADI, 2001) and 0.05 mg/kg bw (ARfD, 2005).<br/>A risk assessment was performed using the EFSA PRIMo including the current CXLs for banana, citrus fruit, cucumber, gherkins, melons exc. watermelons, Japanese persimmons, pome fruit, potato, raspberries, strawberries and wheat. Due to the rather old residue evaluation a refinement using HR and STMR values was impossible. Distribution between pulp and peel was not taken into account.<br/>As can be seen from this rather rough estimation ADI is exceed for a couple of WHO clusters, i. e. cluster B, E, F, D, with residues in potatoes account for a major part of the residues. It can also be stated that for European consumers children are most likely at risk.<br/>For European consumers the ARfD is exceeded for potatoes, pome fruit, Japanese persimmon as well as for citrus fruit, banana and melons, not taking into account distribution between peel and pulp. Changing the variability factor to 3 as used by JMPR will change the outcome of the assessment dramatically. Potatoes, pome fruits as well as citrus fruit, bananas and melons, not taking into account distribution between peel and pulp are still exceeding the ARfD.<br/><b>Await advice from JMPR on public health concerns</b></p> | 1994R, 2005T        | 0.03 2001   | 0.05 2005 |

| Bromopropylate (70)<br>[Syngenta]<br><b>Not supported by the manufacturer</b><br>Concern Form lodged | Bromopropylate (70) | The active substance was first included in 1973 and re-evaluated in 1993, but not since. In the evaluation of 1993 an ADI was set at 0.03 mg/kg bw/d but no ARfD.<br>Since no ARfD was ever set and data for evaluation are missing (supervised field trials, processing studies), the MRLs should be re-evaluated after 41 years | Since in 1993 it was not yet common practice to set an ARfD, EFSA used the ADI to assess the acute effects in the short term intake. A risk assessment was performed using the EFSA PRIMo including the existing CXLs for citrus fruits, pome fruits and grapes. The highest chronic exposure was calculated for the German child, representing 124% of the ADI. Since there were no supervised field trials complying with the critical GAP or reliable processing studies, the intake could not be further refined. The acute intake assessment (using the ADI-value) shows exceedance of the toxicological reference value for citrus fruits (884% for oranges, 594% for grapefruit, 371% for mandarins, 230% for lemons, and 134% for limes), pome fruits (653% for apples, 607% for pears), table grapes (437%) and wine grapes (158%). | Ethoxyquin (35)<br>One CXL - pear    | Ethoxyquin (35) |             | The substance is not authorised in the EU and no import tolerances exist. EFSA concluded that the metabolism data used by JMPR for establishing the residue definition for enforcement and risk assessment could not be confirmed as the metabolism data showed deficiencies using the JMPR residue definition. EFSA concluded that the CXL for pears exceeded the ARfD (109%) and proposed to lower the EU MRL to the LOD. The last periodic review of residues was performed by JMPR in 1999 and of toxicology in 1998. This is approximately 15 years ago. It seems that Japan has recently performed a toxicological evaluation of the substance.   |                     |     |      |
| Guazatine (114)                      | Guazatine (114) |             | <p>Guazatine was first discarded as not having an ADI/ARfD at all. However, this appears to be a special case. In 1978 an ADI was derived, which was withdrawn in 1997 since “The Meeting concluded that it could not establish an ADI for guazatine owing to the inadequate information on its composition and concerns about the production of rare malignant tumours in mice”. “The Meeting estimated the maximum residue level shown in Annex I. As the Meeting withdrew the ADI for guazatine this is recorded only as a Guideline Level”. As such no CXLs are supposed to be available. However, a CXL for cereal grains (0.05* mg/kg G = guideline value) and citrus fruit (5 mg/kg Po = post harvest use) can still be found in the Codex alimentarius.</p> <p>Annex 1 and Annex 2 of the JMPR 1997 evaluation, show that the CXL for Citrus fruits of 5 mg/kg Po is withdrawn, but that for cereals a maximum residue level of 0.05* mg/kg is proposed. The CXL of 5 mg/kg has been adopted by the CCPR in 1999. It is unclear which discussion is behind this. The problem is that this specific MRL-crop combination gives rise to a human health risk. Only “guideline levels” (5 mg/kg) for citrus exist since the ADI was withdrawn in 1997. It was recommended that these guideline levels would remain until a new ADI is recommended. It is proposed either to delete the guideline level or request sponsors to support a re-evaluation of guazatine.</p> <p><b>There are no CXLs in place in CX/PR 14/46/5 – instead guideline levels are set – clarification from Codex Secretariat is sought</b></p> |                     |     |      |

| Prochloraz (142)<br>[Bayer CropScience]  |                       |             | Last reviewed by JMPR in 2001. In 2011, Prochloraz was re-evaluated in the EU and a lower acute toxicological endpoint of 0.025 mg/kg/bw/d was established compared to a value of 0.1 set by JMPR in 2001. From the JMPR report (2004) the IESTI was calculated to be greater than 25% of the ARfD at 0.1 for several commodities. With a lowering of the ARfD by a factor of 4, the CXLs for banana, edible offal (mammalian), grapefruit, mandarin, orange, papaya, pineapple, shaddocks/pomelos are expected to be of concern. The EU values were derived from 2 studies that do not appear to have featured in the JMPR evaluation. The multi-generation rat study “Reader 1993” submitted as part of a dossier by a notifier and a 90 day dog study “Lancaster 1979” submitted by another notifier. In addition a change in the interpretation the significance of extended gestation in both the “Cozen 1980 study” and the “Reader 1993” study also impacted. It should also be noted the many papers reviewed as part of the literature search around prochloraz were also considered when the list of endpoints and critical values were set. |                     |                |              |

| <p><b>Tolyfluanid (162)</b></p> <p><b>RECOMMEND REMOVAL FROM CCPR LIST OF PESTICIDES – NO KNOWN NATIONAL REGISTRATIONS</b></p> |         |             | <p>EFSA identified an exceedance of the ARfD for apples, pears, table grapes and lettuce representing 159 %, 147 %, 146 % and 127 % of the ARfD, respectively. For grapes the CXL is not sufficiently supported by data and a risk to consumers cannot be excluded. For quinces, medlar, loquat, strawberries, blackberries, raspberries, currants, tomatoes, peppers, cucumbers, leek and hops the existing CXLs are supported by data and no risk to consumers is identified. However these CXLs were initially based on an EU GAP which is no longer authorised; there are no relevant authorisations or import tolerances reported at EU level. EU GAPs are no longer valid and the substances no longer used worldwide. All MRLs were set to LOQ in the EU by Regulation (EU) No 899/2012 and no comments received during SPS notification. JMPR has a higher ARfD (0.5 mg/kg bw/d) than EFSA (0.25 mg/kg bw/day) but this is based on the same data. EFSA included two more metabolites in the RD than JMPR. Substance is currently listed in Table 4 of the Priority list (substances for which specific GAP is no longer supported) and to our information is no longer supported worldwide. The EU therefore requests the revocation of the CXLs.</p> |                     |     |      |

**Candidates for inclusion in Table 2A based on public health concerns**

| Toxicology            | Comment   |
|-----------------------|---|
| Quintozene (64)<br>EU | Not approved (July 2000, RMS EL) in EU.<br>Insufficient data available with regard to certain data gaps concerning mammalian toxicology and residues and there are concerns for the safety of consumers.<br>MORE INFORMATION IS REQUIRED  |
| Diazinon (22)<br>EU   | Not approved (September 2006, RMS PT)<br>- Insufficient information on the presence of very toxic impurities<br>- Concerns identified with regard to consumer exposure<br>MORE INFORMATION IS REQUIRED  |
| Phosalone (60)<br>EU  | Not approved (June 2006, RMS AT)<br>- Insufficient information available with regard to consumer exposure<br>- Concern identified with regard to acute exposure to vulnerable groups of consumers and lack of toxicological characterisation of some metabolites and impurities<br>MORE INFORMATION IS REQUIRED |
| Amitraz (122)<br>EU   | Not approved (June 2003, RMS AT)<br>- Information insufficient<br>- concerns identified with regard to the acceptability of acute exposure of consumers in view of the possible neurological effects of the active substance.<br>MORE INFORMATION IS REQUIRED   |

**TABLE 2B: PERIODIC REVIEW LIST (COMPOUNDS LISTED UNDER 15 YEAR RULE BUT NOT YET SCHEDULED OR LISTED)**

**Note 3:** Compounds listed in this table meet criterion 2 (15 year rule). Decisions on the prioritization of these compounds should be based on criterion 1 (public health concerns), criteria 4 and 7 (date that data will be submitted and availability of current labels arising from recent national evaluations) and other relevant criteria found in pp135-136 of the *Codex Procedural Manual*. Compounds are listed in Table 2b awaiting advice on supporting data packages and/or an indication of manufacturer/member country support.
